1.	Management Point Issue with error code 500.....	78
2.	Inbox DDR Backlog Issue.....	79
3.	Packages which are waiting to install stage for long days	79
4.	ConfigMgr Backup Failed, Error: VSS_E_WRITERERROR_TIMEOUT	80
5.	ConfigMgr Backup Failed: Backup failed for component SMS_SITECODE	80
6.	Duplicate GUID Issues	81
7.	SMS_INVENTORY_DATA_LOADER Failed to process the records.....	81
8.	SMS_WSUS_SYNC_Manager Failed to sync Software Updates.....	82

Introduction

This section describes the purpose and audience of this guide. Any terminology or acronyms used in this document will be referenced in the Glossary of the Appendix section.

Purpose

The intent of this ConfigMgr infrastructure Management helps an Administrator to ensure that the ConfigMgr infrastructure is healthy.

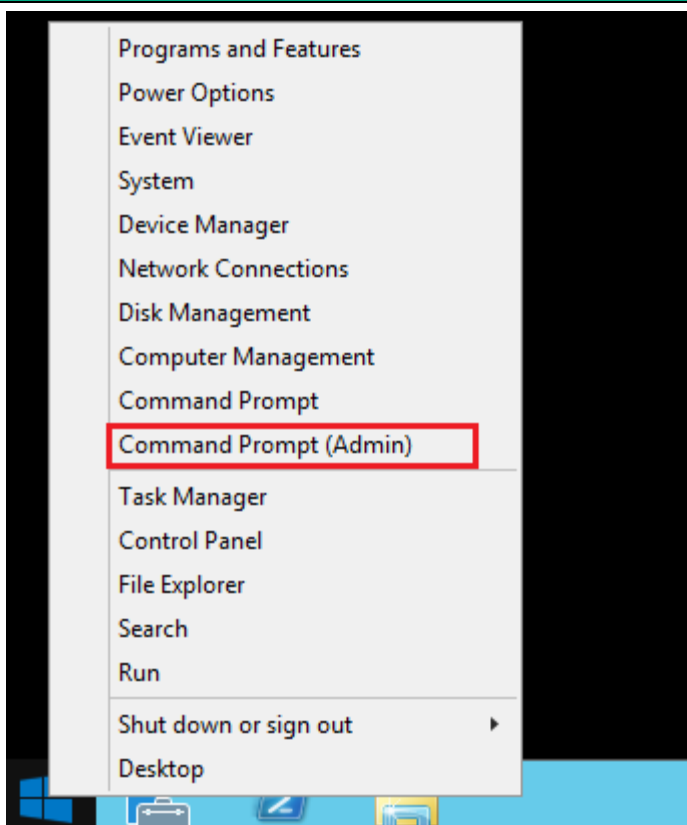

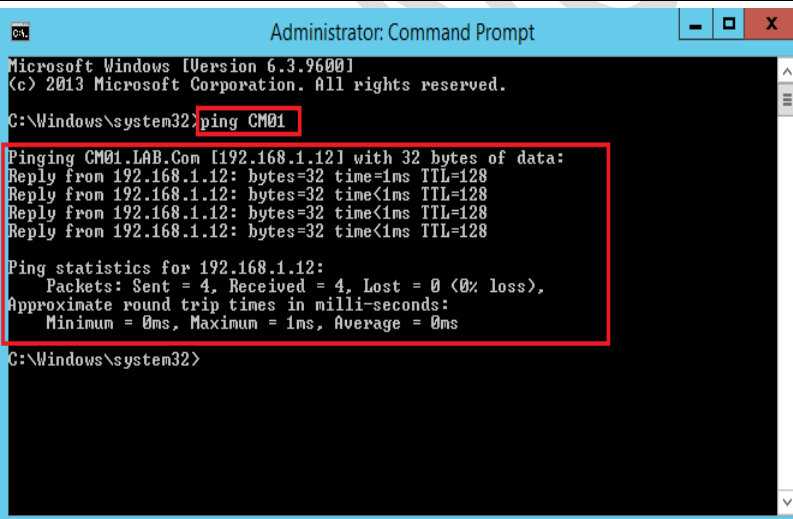

ConfigMgr Administration Best Practices

1. Use AD Sites to define ConfigMgr boundaries to avoid overlapping.
2. Automate maintenance tasks and create custom maintenance tasks.
3. Create OUs for ConfigMgr Servers.
4. Use AD Groups and Accounts for managing the ConfigMgr environment.
5. Keep administrative rights to a minimum level of Access.
6. Create a plan for role-based administration and apply only the rights necessary to perform job function.
7. Use NTFS on all client and server partitions.
8. Assign the least permissions possible.
9. Do not install site servers on Domain Controllers.
10. Do not install other services that use the local system account.
11. Use GPO and ConfigMgr Client Push Method to install client agent on computers.
12. Add only required users to ConfigMgr admins group, or created alternate groups and use role-based access control for permissions.
13. Create ConfigMgr AD OU containers for service IDs, Application Management ID's, Management groups and Servers.
14. Lock down the ConfigMgr Infrastructure using Domain Groups and Accounts.
15. Configure SUP on every primary and secondary site server.
16. Enable SMTP access on Top ConfigMgr server to send a custom SSRS Reports.
17. Only deploy the ConfigMgr client to computers that are trusted.
18. Do not use a domain admin account as the client push installation account.
19. SQL Server must be configured to use Windows Authentication.
20. Remove or Disable the Guest account from the ConfigMgr SQL Database.

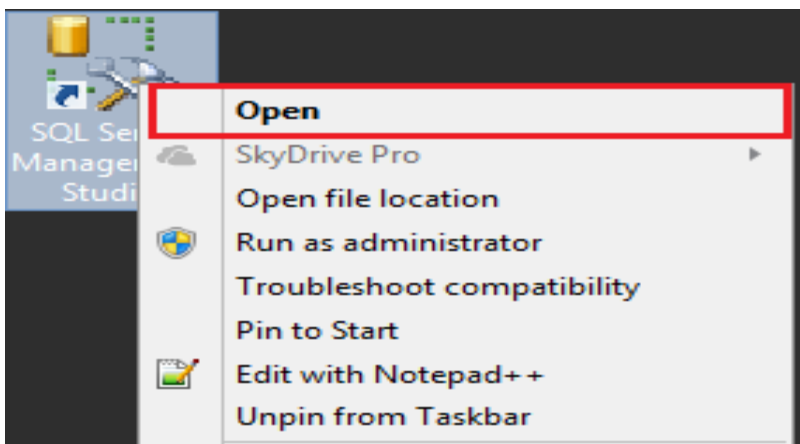

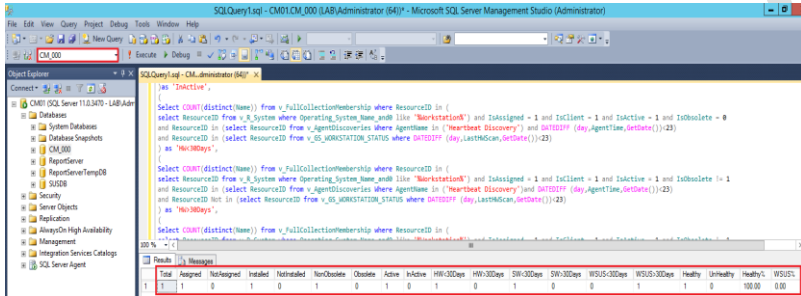

ConfigMgr Health Check Task

1. Daily - Check ConfigMgr Roles Status

Pull the ConfigMgr Servers list from ConfigMgr Central Database or refer the ConfigMgr Design documents to get the Site servers list.

#	Screen Shot	Steps Instructions
1		<p>Logon any of the ConfigMgr server</p> <ol style="list-style-type: none">1. Start → Command Prompt (Admin) → Click.
2		<p>In the Command Prompt window.</p> <ol style="list-style-type: none">1. Type ping command space server name <p>E.g.: Ping CM02</p> <p>If a server is not pingable:</p> <ol style="list-style-type: none">1. Identify the problem and work on to fix the issues.

2. Daily - Check Workstations Agent Health Status

#	Screen Shot	Steps Instructions
1		Open SQL Server Management Studio.
2		<p>Execute the below query then you will get the Workstations Client Health Details.</p> <p>SQL Query:</p> <pre> Select (Select COUNT(distinct(Name)) from v_FullCollectionMembership where ResourceID in (select ResourceID from v_R_System where Operating_System_Name_and0 like '%Workstation%' and ResourceID in (select ResourceID from v_AgentDiscoveries where AgentName in ('Heartbeat Discovery') and @RTDOPF (day,AgentTime,@RTDOPF(1))>23) and ResourceID in (select ResourceID from v_R_System where Operating_System_Name_and0 like '%Workstation%' and ResourceID in (select ResourceID from v_AgentDiscoveries where AgentName in ('Heartbeat Discovery') and @RTDOPF (day,AgentTime,@RTDOPF(1))>23)) as 'Total', (Select COUNT(distinct(Name)) from v_FullCollectionMembership where ResourceID in (select ResourceID from v_R_System where Operating_System_Name_and0 like '%Workstation%' and IsAssigned = 1) as 'Assigned', (Select COUNT(distinct(Name)) from v_FullCollectionMembership where ResourceID in (select ResourceID from v_R_System where Operating_System_Name_and0 like '%Workstation%' and IsAssigned != 1) as 'NotAssigned', (Select COUNT(distinct(Name)) from v_FullCollectionMembership where ResourceID in (select ResourceID from v_R_System where Operating_System_Name_and0 like '%Workstation%' and IsAssigned = 1 and IsClient = 1) as 'Installed', (</pre>

4. Daily - Check Workstations Client Health Summary Status

#	Screen Shot	Steps Instructions
1	 A screenshot of a Windows 8 Start menu. The menu is open, showing a list of applications and system tools. The 'Command Prompt (Admin)' option is highlighted with a red rectangular box. Other visible options include Programs and Features, Power Options, Event Viewer, System, Device Manager, Network Connections, Disk Management, Computer Management, Command Prompt, Task Manager, Control Panel, File Explorer, Search, Run, Shut down or sign out, and Desktop. The Windows logo is visible in the bottom-left corner of the Start menu.	Logon any of the ConfigMgr server

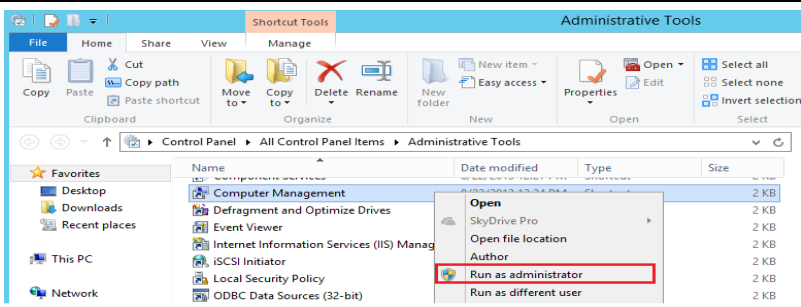

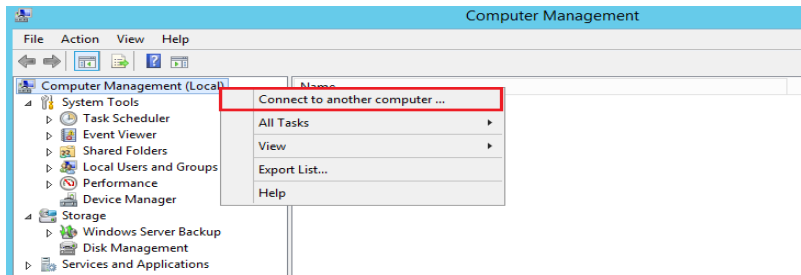

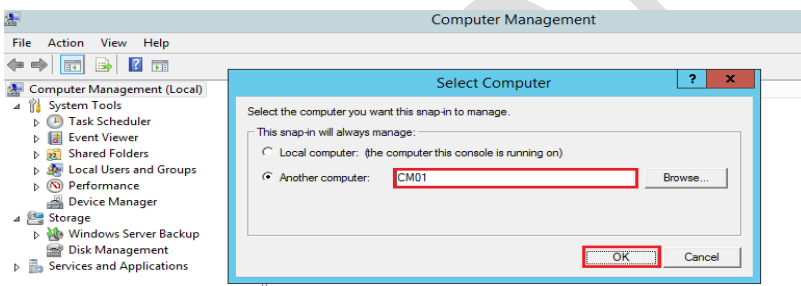

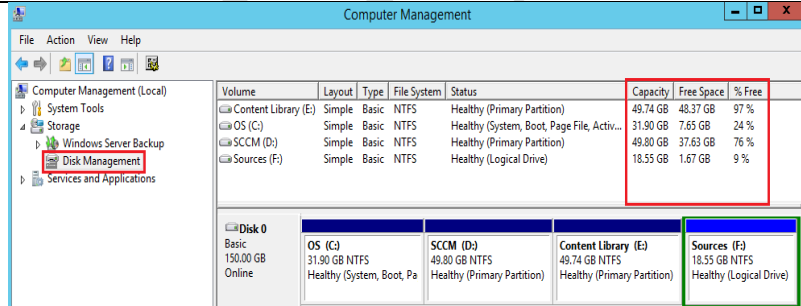

5. Daily - Check ConfigMgr Servers Inventory Status

Pull the ConfigMgr Servers list from ConfigMgr Central Database or refer the ConfigMgr Design documents to get the Site servers list.

#	Screen Shot	Steps Instructions
1		<p>Logon any of the ConfigMgr server</p> <p>2. Start → Command Prompt (Admin) → Click.</p>
2		<p>In the Command Prompt window.</p> <p>2. Type ping command space server name</p> <p>E.g.: Ping CM02</p> <p>If a server is not pingable:</p> <p>2. Identify the problem and work on to fix the issues.</p>

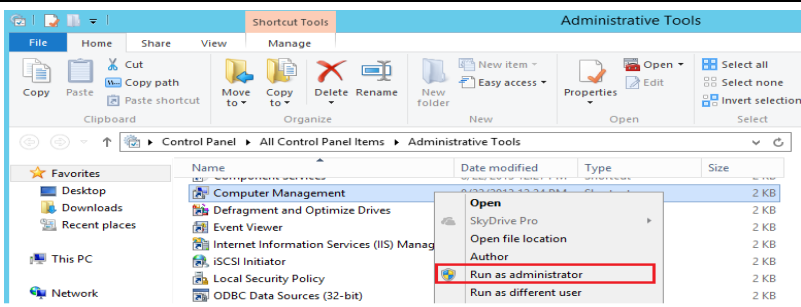

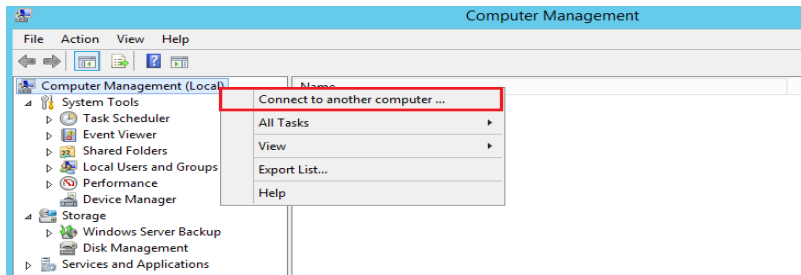

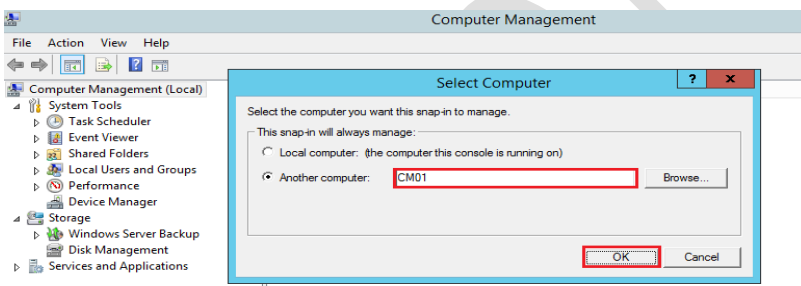

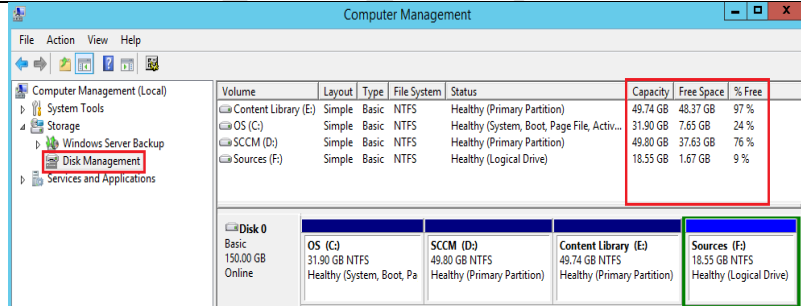

6. Daily - Check Servers Disk Space Percentage Status

Pull the ConfigMgr Servers list from ConfigMgr Central Database or refer the ConfigMgr Design documents to get the Site servers list.

#	Screen Shot	Steps Instructions
1		Select Computer Management → Right Click → Run as Administrator → Click.
2		Select Computer management → Right Click → Select Connect to another computer → Click.
3		Select the Server name and click OK.
4		Expand Disk Management → See the Disk space size information on right side.

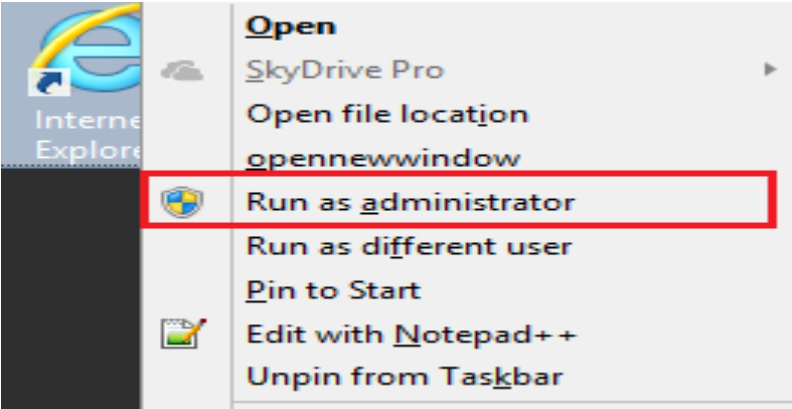

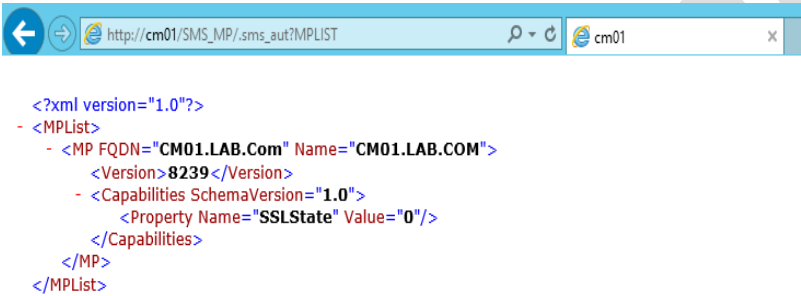

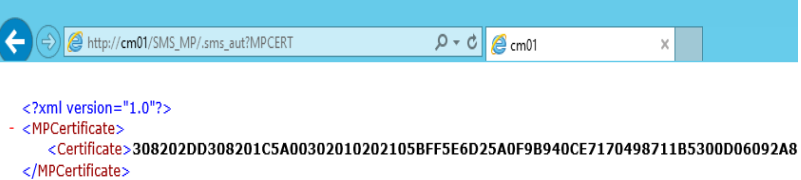

7. Daily - Check Servers Disk Space GB Status

Pull the ConfigMgr Servers list from ConfigMgr Central Database or refer the ConfigMgr Design documents to get the Site servers list.

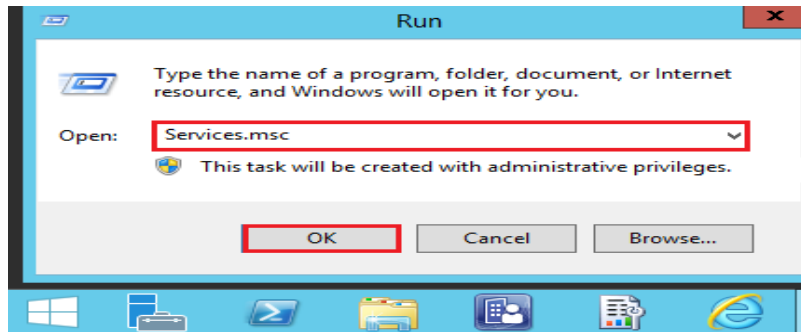

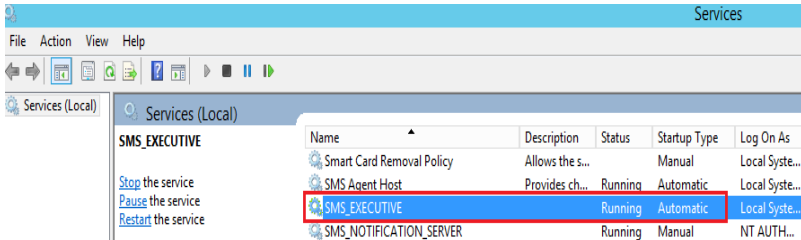

#	Screen Shot	Steps Instructions
1		Select Computer Management → Right Click → Run as Administrator → Click.
2		Select Computer management → Right Click → Select Connect to another computer → Click.
3		Select the Server name and click OK.
4		Expand Disk Management → See the Disk space size information on right side.

8. Daily - Check MP Cert and MP List Status

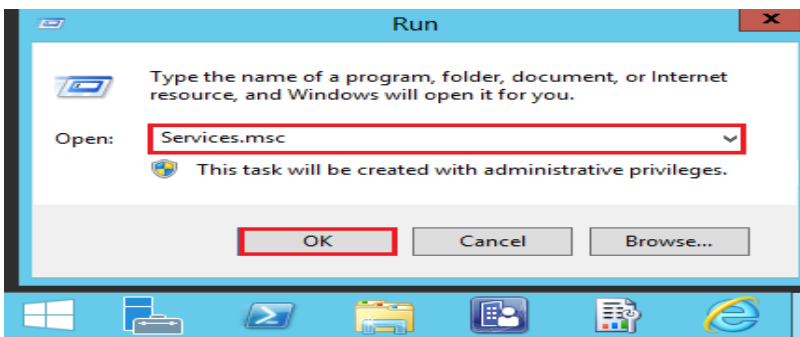

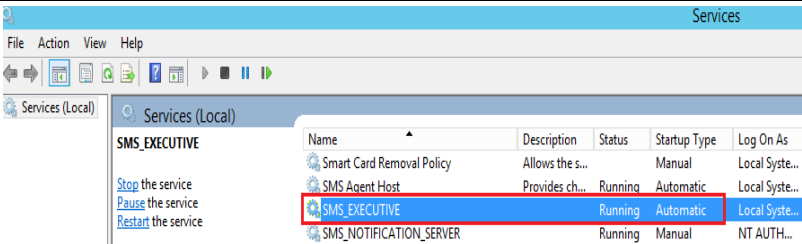

Pull the MP Servers list from ConfigMgr Central Database or refer the ConfigMgr Design documents to get the MP servers list.

#	Screen Shot	Steps Instructions
1		Open Internet Explorer application.
2		<p>Provide the below MP List URL.</p> <p>http://siteservername/SMS_MP/.sms_aut?MPLIST</p> <p>Ensure there should not be any error on this page.</p> <p>E.g.: http://CM01/SMS_MP/.sms_aut?MPLIST</p> <p>If any error message:</p> <ol style="list-style-type: none"> 1. Identify the problem and start work on to fix the issue.
3		<p>Provide the below MP Cert URL.</p> <p>http://siteservername/SMS_MP/.sms_aut?MPCERT</p> <p>Ensure there should not be any error on this page.</p> <p>E.g.: http://CM01/SMS_MP/.sms_aut?MPCERT</p> <p>If any error message:</p> <ol style="list-style-type: none"> 1. 21. Daily - Check Current Deployments Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <ol style="list-style-type: none"> 4. Identify the problem and start to work on to fix the issues.

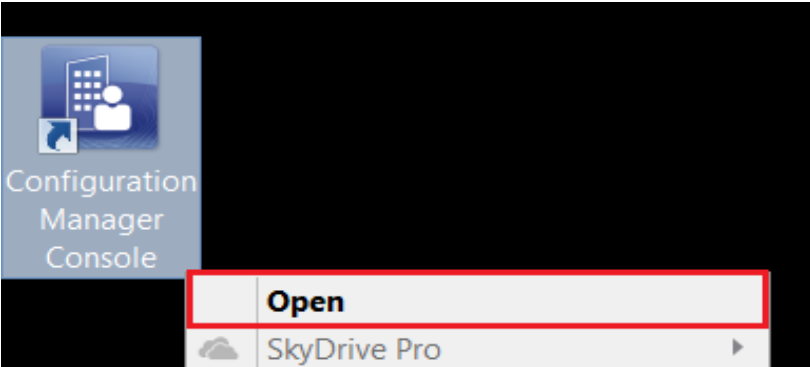

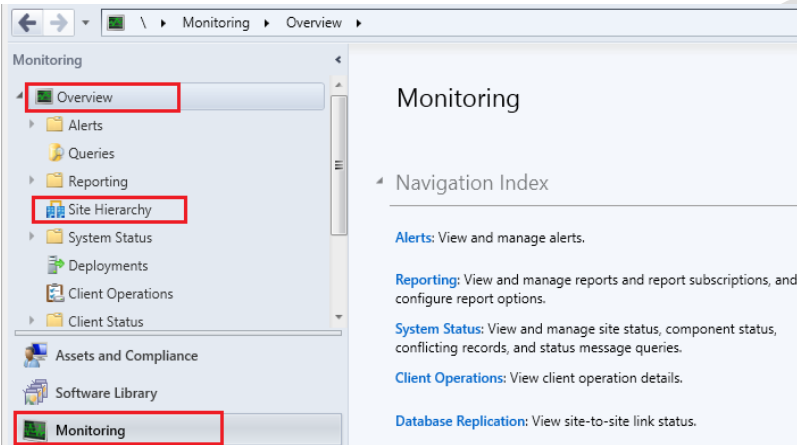

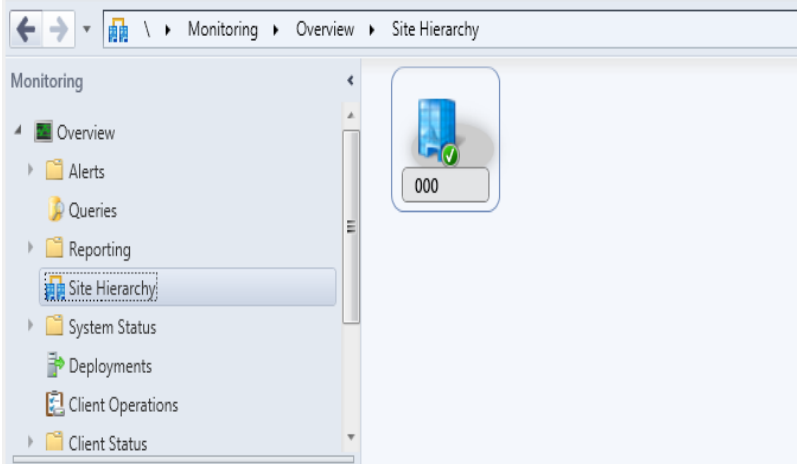

22. Daily - Check Software Deployments and CSV Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <ol style="list-style-type: none"> Identify the problem and start to work on to fix the issues.

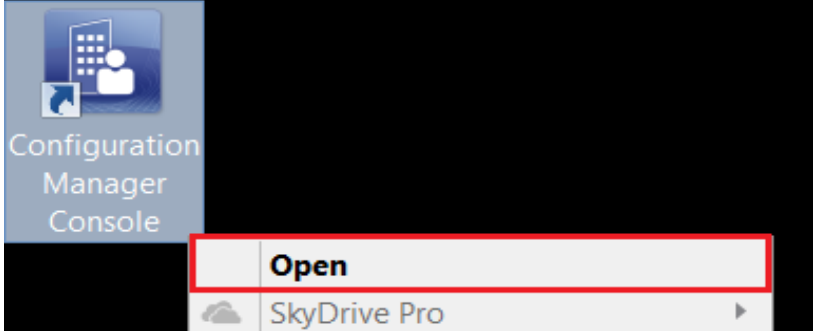

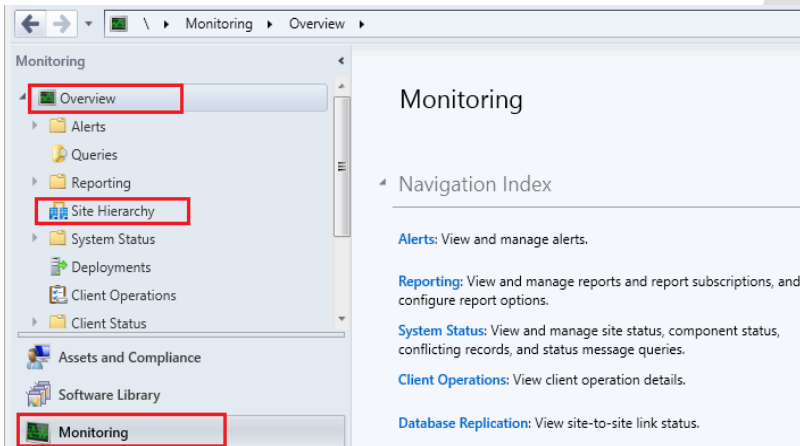

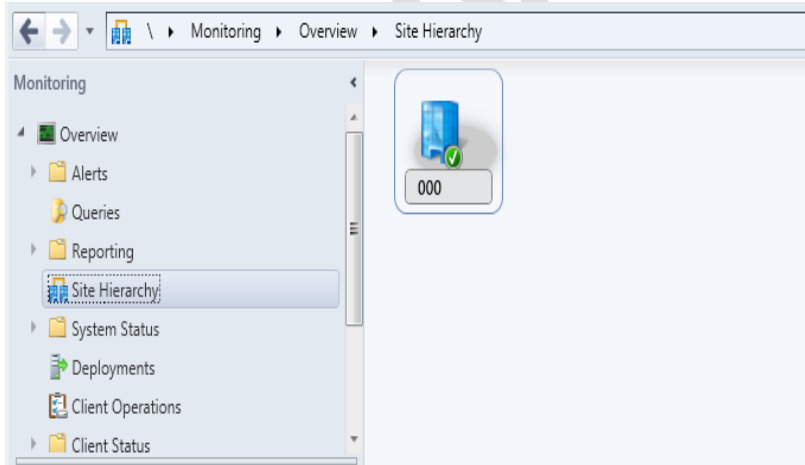

23. Daily - Check Application Deployments Status

#	Screen Shot	Steps Instructions
1	 A screenshot of the Configuration Manager Console. The 'Configuration Manager Console' title bar is visible. Below it, a red rectangle highlights the 'Open' button. The 'SkyDrive Pro' taskbar icon is also visible.	Launch Configuration Manager Console.
2	 A screenshot of the Configuration Manager console. The 'Monitoring' tab is selected in the left-hand navigation pane. The 'Site Hierarchy' option is highlighted with a red rectangle. The 'Monitoring' pane on the right shows a 'Navigation Index' with links to Alerts, Reporting, System Status, Client Operations, and Database Replication.	Go to Monitoring → Select → Site Hierarchy.
3	 A screenshot of the Configuration Manager console showing the 'Site Hierarchy' view. The 'Site Hierarchy' option is highlighted in the left-hand navigation pane. The main pane shows a server icon with a green checkmark, indicating that the site is healthy. The server name '000' is displayed below the icon.	<p>Green tick on the Site Hierarchy indicates the Site health.</p> <p>If a server is shown in red:</p> <ol style="list-style-type: none">6. Identify the problem and start to work on to fix the issues.

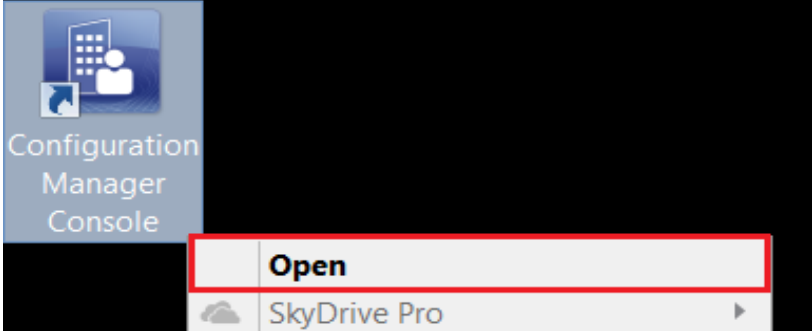

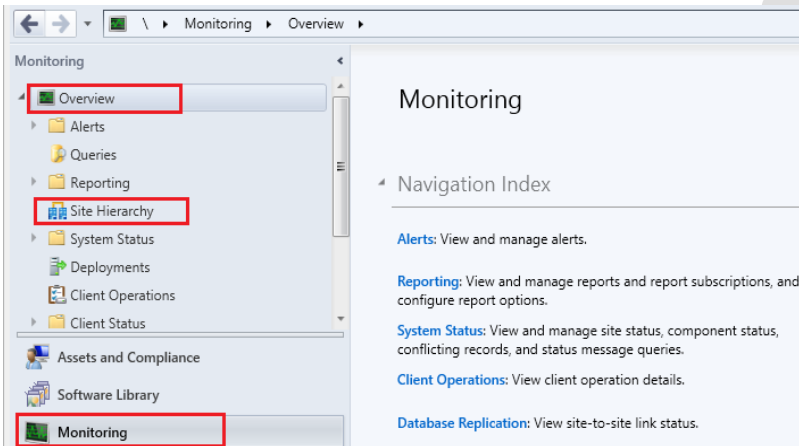

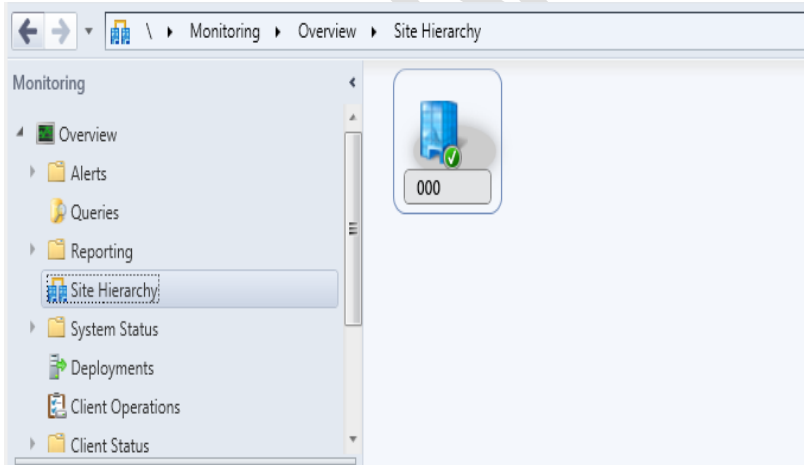

24. Daily - Check Patch Deployments Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <ol style="list-style-type: none">7. Identify the problem and start to work on to fix the issues.

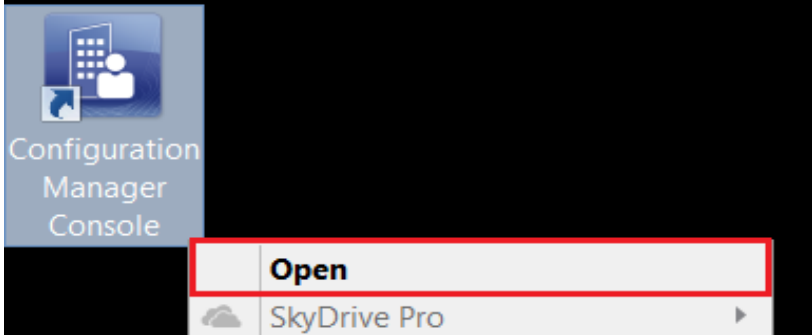

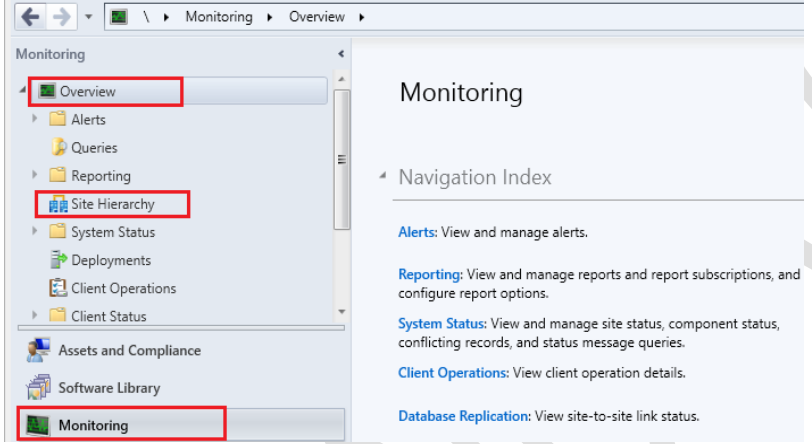

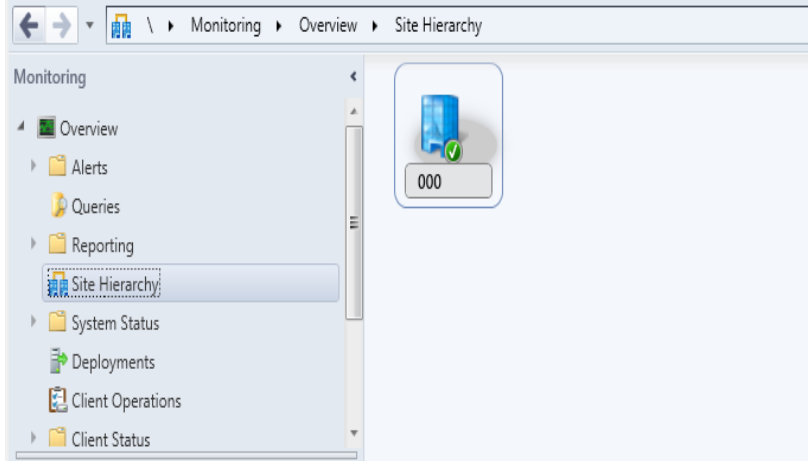

25. Daily - Check OS Deployments Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <ol style="list-style-type: none"> Identify the problem and start to work on to fix the issues.

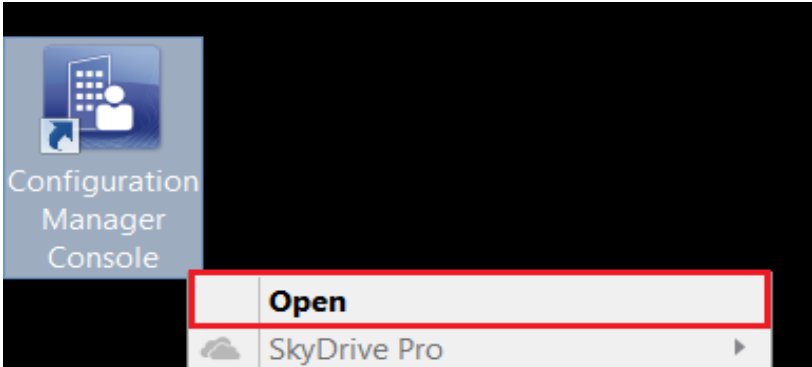

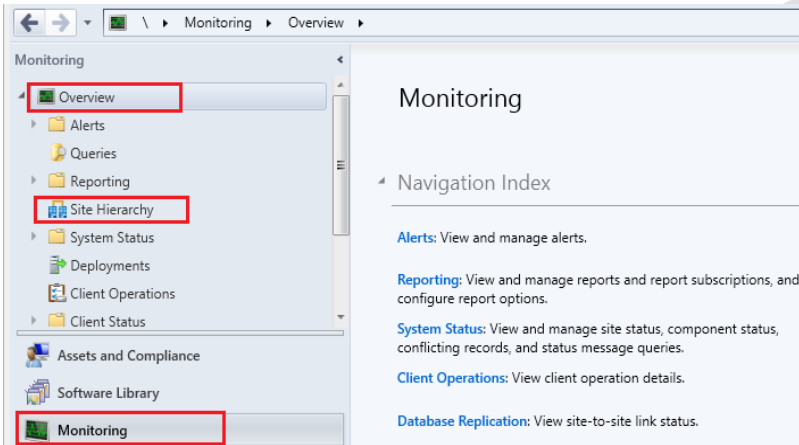

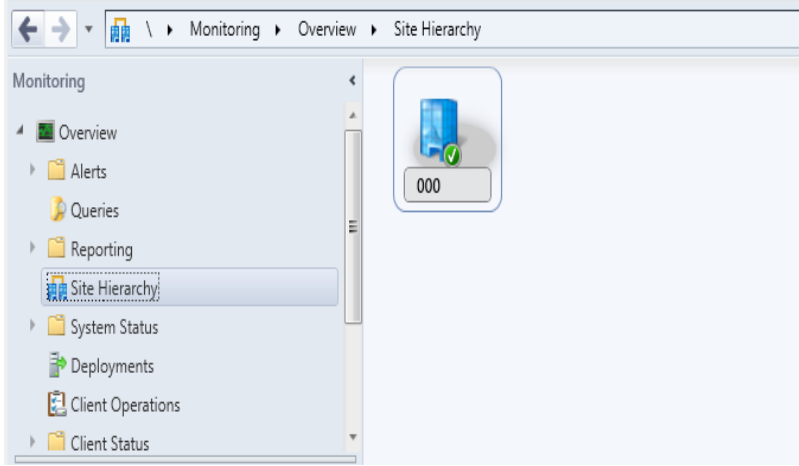

26.Daily - Check Site Servers Not Communicated Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <ol style="list-style-type: none">9. Identify the problem and start to work on to fix the issues.

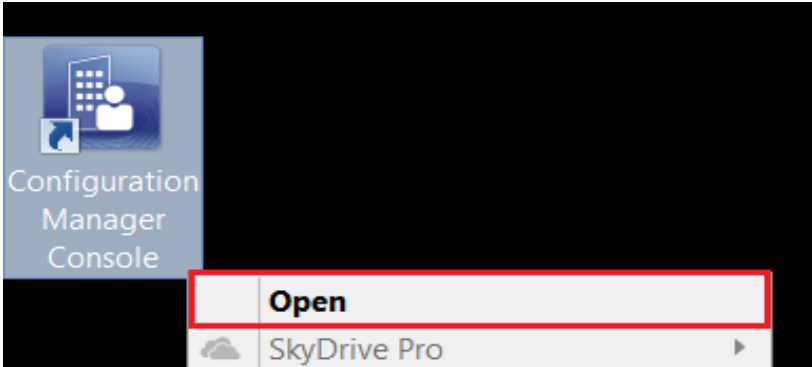

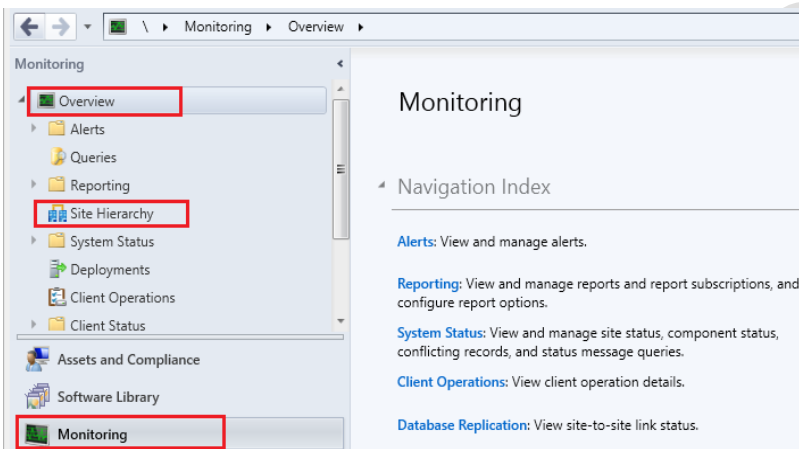

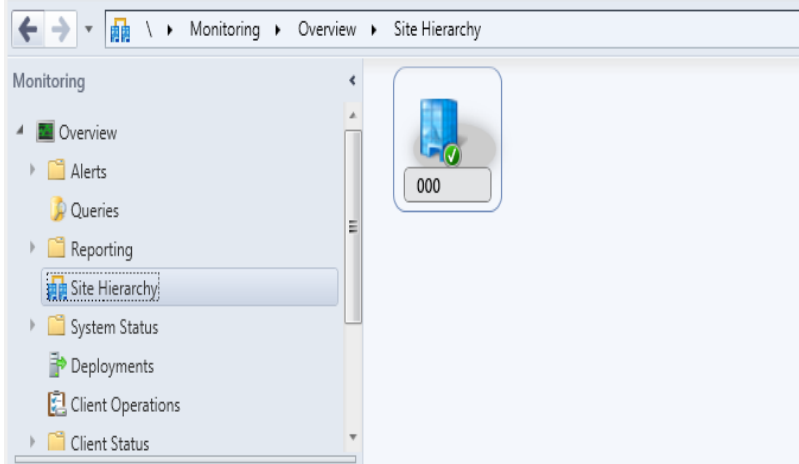

27. Daily - Check MP Components Status

#	Screen Shot	Steps Instructions
1	 <p>The screenshot shows the Configuration Manager Console interface. A red rectangular box highlights the 'Open' button located below the console title bar. The background is dark, and the 'Configuration Manager Console' text is visible on the left.</p>	<p>Launch Configuration Manager Console.</p>
2	 <p>The screenshot shows the Configuration Manager console with the 'Monitoring' view selected. In the left-hand navigation pane, the 'Monitoring' folder and the 'Site Hierarchy' sub-item are highlighted with red boxes. The main pane displays the 'Monitoring' overview with a navigation index for Alerts, Reporting, System Status, Client Operations, and Database Replication.</p>	<p>Go to Monitoring → Select → Site Hierarchy.</p>
3	 <p>The screenshot shows the 'Site Hierarchy' view within the Configuration Manager console. The left navigation pane shows 'Site Hierarchy' selected. The main area displays a single server icon with a green checkmark (tick) next to it, indicating that the site is healthy. Below the icon is a box containing the number '000'.</p>	<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <ol style="list-style-type: none"> 10. Identify the problem and start to work on to fix the issues.

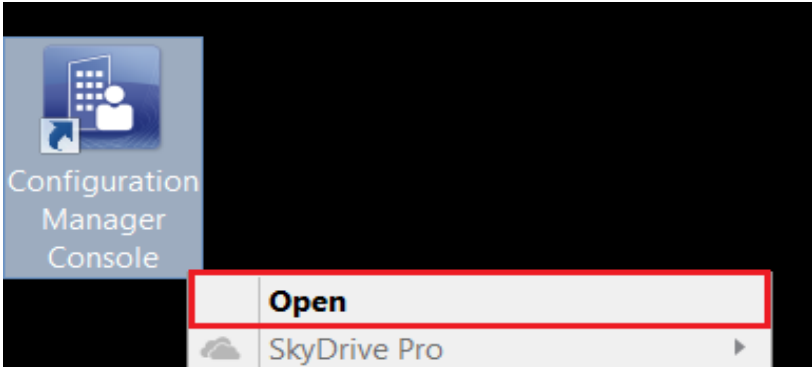

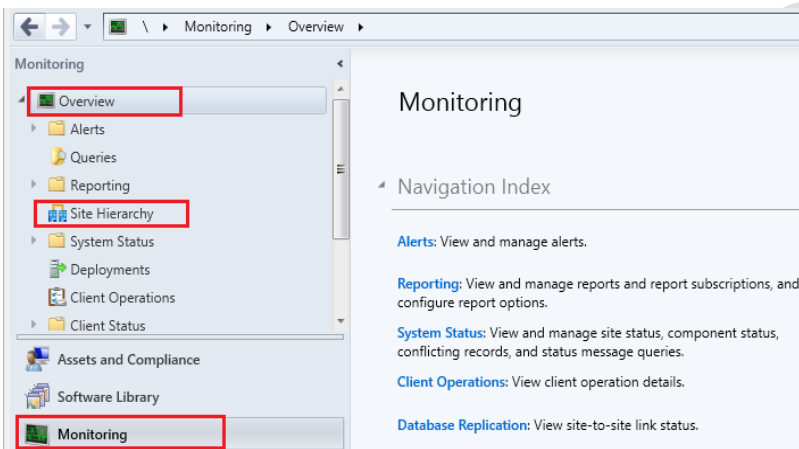

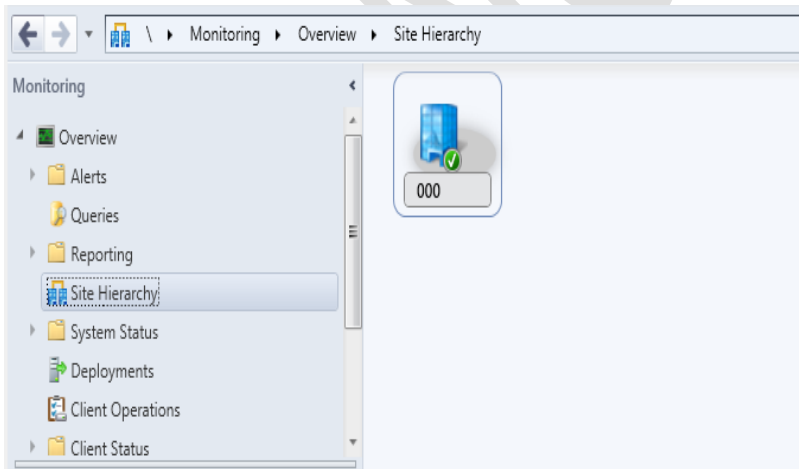

28.Daily - Check DP Components Status

#	Screen Shot	Steps Instructions
1	 A screenshot of the Configuration Manager Console. The 'Configuration Manager Console' title bar is visible. Below it, a context menu is open with the 'Open' option highlighted in red. The background is dark, and a 'SkyDrive Pro' icon is visible at the bottom.	Launch Configuration Manager Console.
2	 A screenshot of the Configuration Manager console. The left-hand navigation pane shows the 'Monitoring' folder expanded, with 'Site Hierarchy' highlighted in red. The main pane shows the 'Monitoring' overview with a 'Navigation Index' section. The 'Monitoring' folder in the left pane is also highlighted in red.	Go to Monitoring → Select → Site Hierarchy.
3	 A screenshot of the Configuration Manager console showing the 'Site Hierarchy' view. The left-hand navigation pane shows the 'Monitoring' folder expanded, with 'Site Hierarchy' highlighted. The main pane shows a single server icon with a green checkmark, indicating that the site is healthy. The server icon has the number '000' below it.	Green tick on the Site Hierachy indicates the Site health. If a server is shown in red: 11. Identify the problem and start to work on to fix the issues.

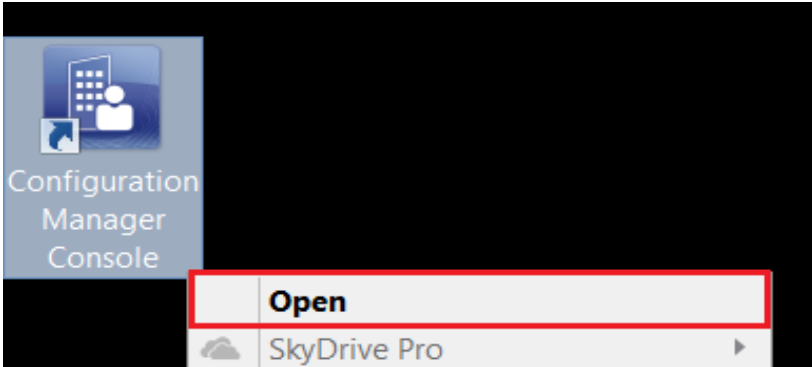

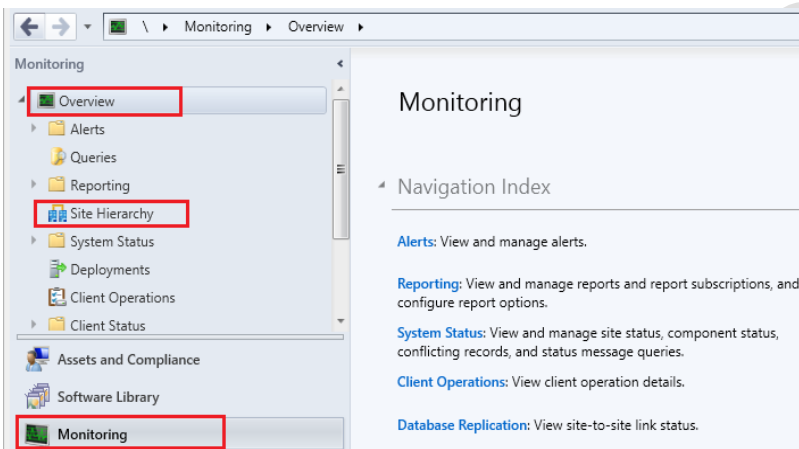

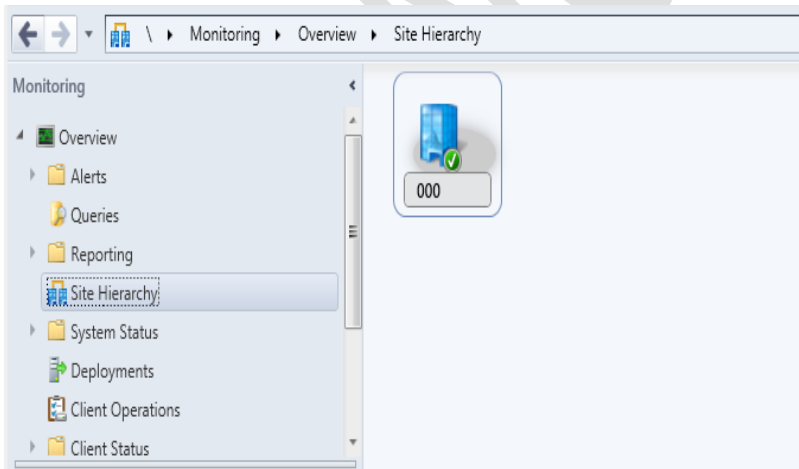

29. Daily - Check Collection Evaluator Components Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>12. Identify the problem and start to work on to fix the issues.</p>

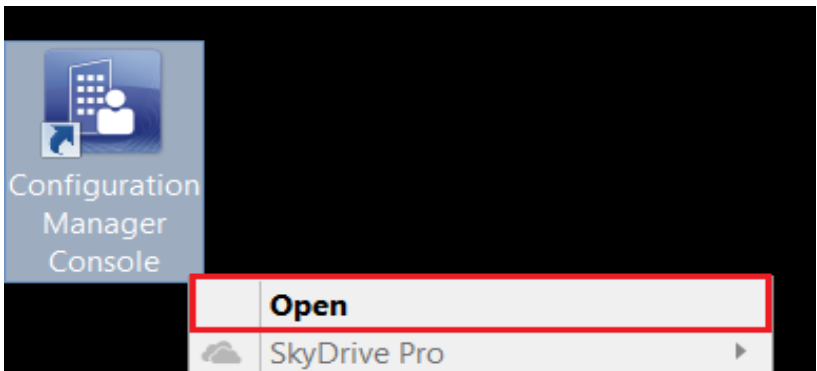

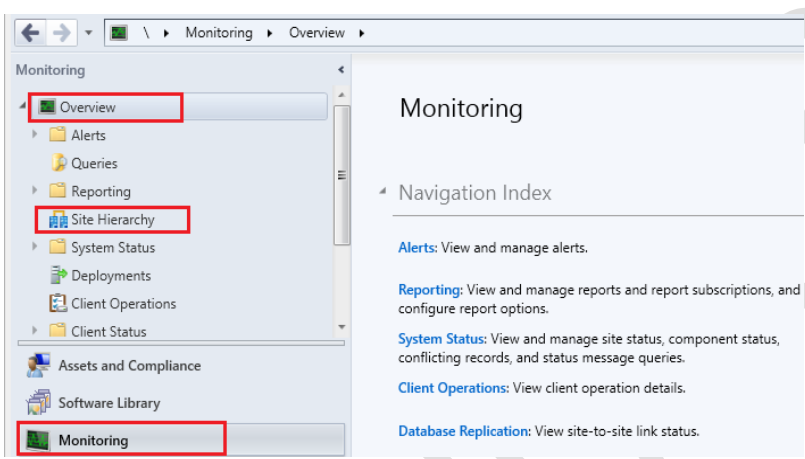

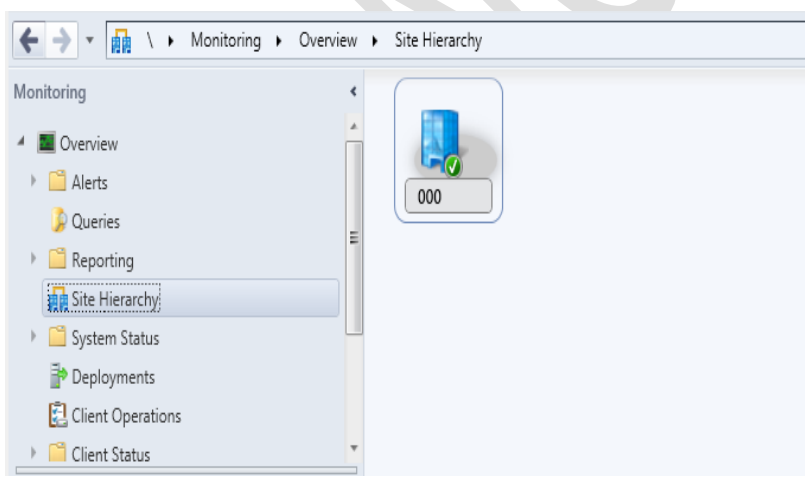

30. Daily - Check Discovery Components Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>13. Identify the problem and start to work on to fix the issues.</p>

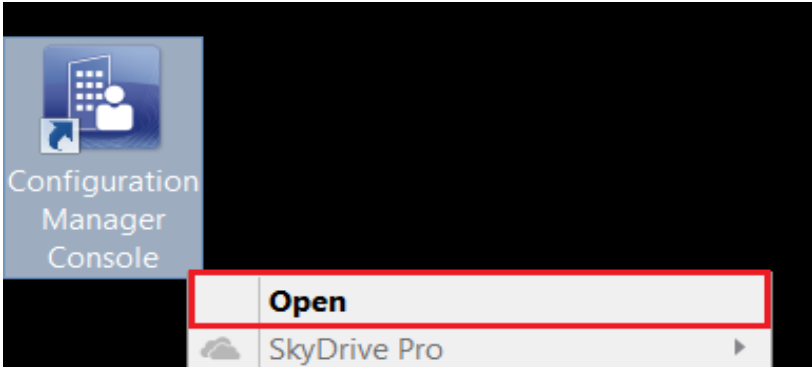

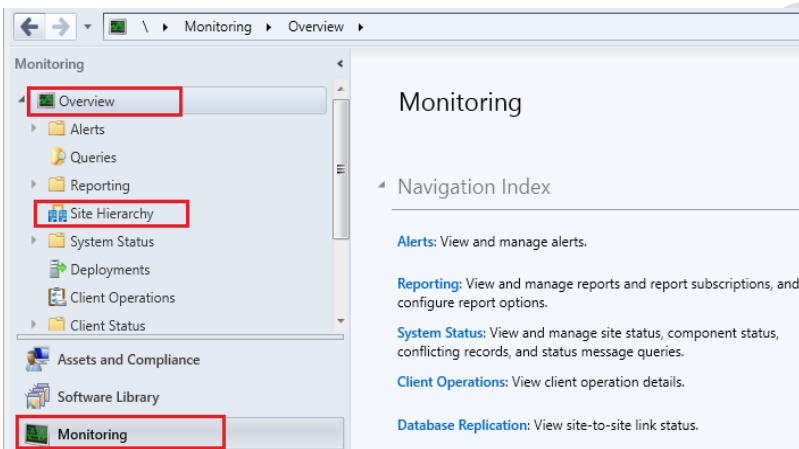

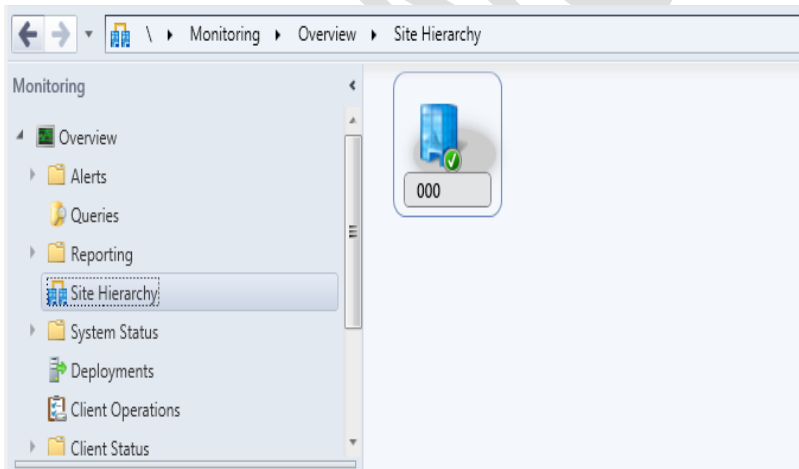

31. Daily - Check DDR Components Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>14. Identify the problem and start to work on to fix the issues.</p>

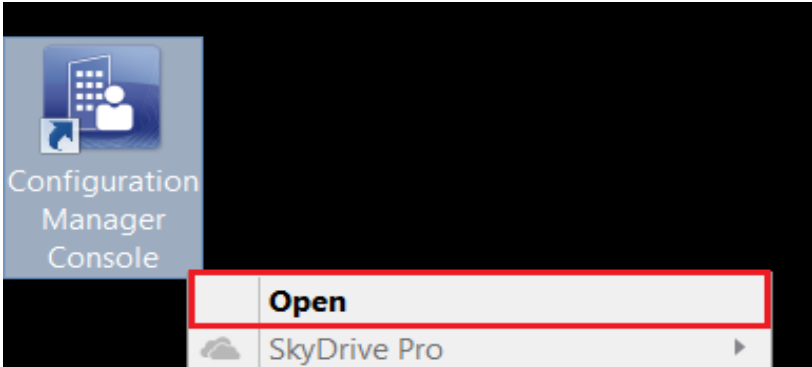

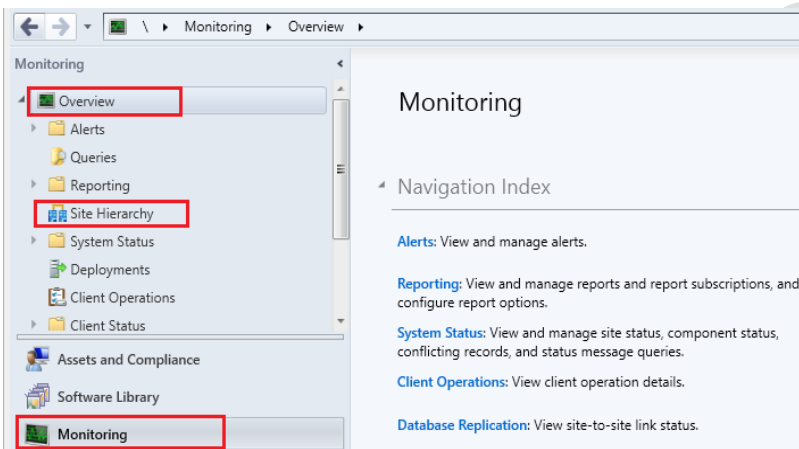

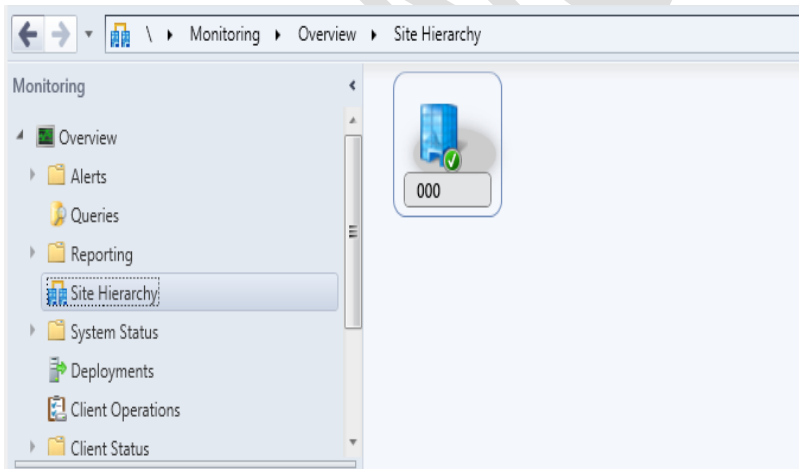

32. Daily - Check CCR Components Status

#	Screen Shot	Steps Instructions
1	 <p>The screenshot shows the Configuration Manager Console interface. A red rectangular box highlights the 'Open' button, which is located below the console title bar. The background is dark, and the text 'Configuration Manager Console' is visible on the left.</p>	<p>Launch Configuration Manager Console.</p>
2	 <p>The screenshot shows the Configuration Manager console with the 'Monitoring' tab selected. In the left-hand navigation pane, the 'Monitoring' folder and the 'Site Hierarchy' sub-item are highlighted with red boxes. The main pane displays the 'Monitoring' overview with a navigation index for Alerts, Reporting, System Status, Client Operations, and Database Replication.</p>	<p>Go to Monitoring → Select → Site Hierarchy.</p>
3	 <p>The screenshot shows the 'Site Hierarchy' view within the Configuration Manager console. A green tick icon is visible next to the site name, indicating that the site is healthy. The left-hand navigation pane shows the 'Site Hierarchy' item selected.</p>	<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>15. Identify the problem and start to work on to fix the issues.</p>

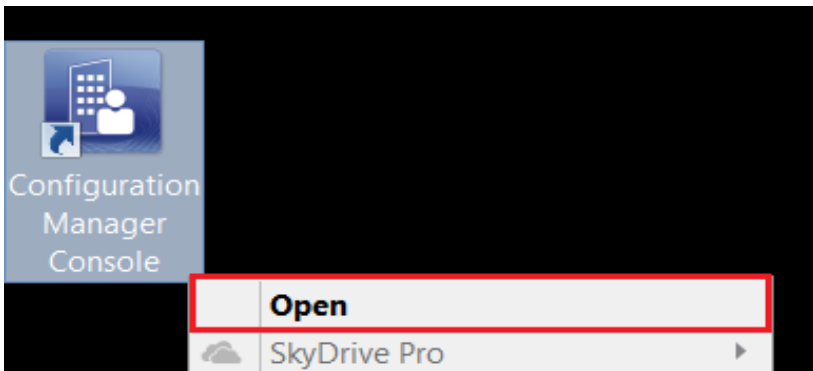

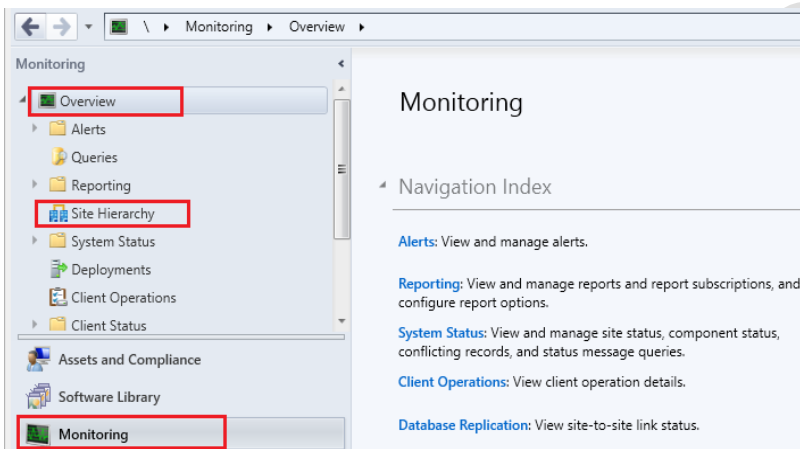

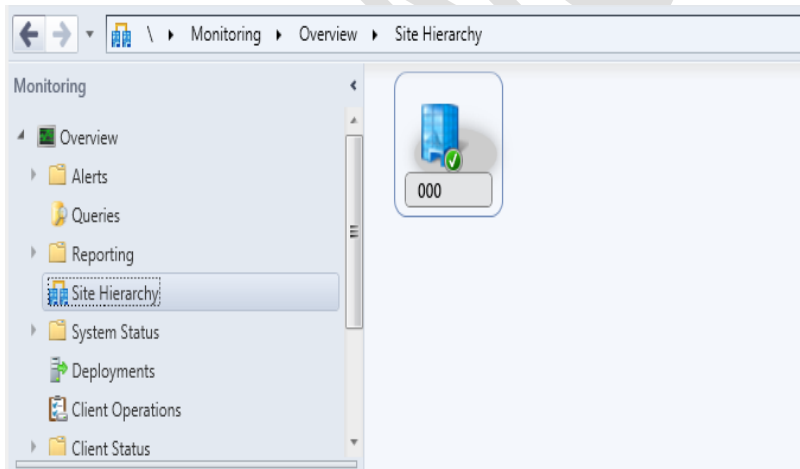

33. Daily - Check WSUS Components Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>16. Identify the problem and start to work on to fix the issues.</p>

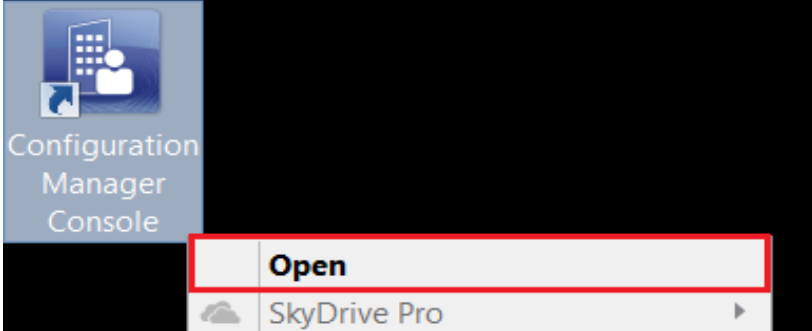

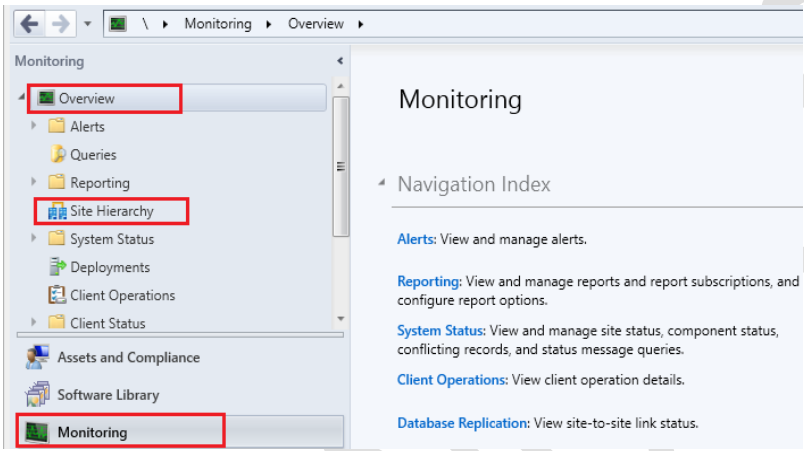

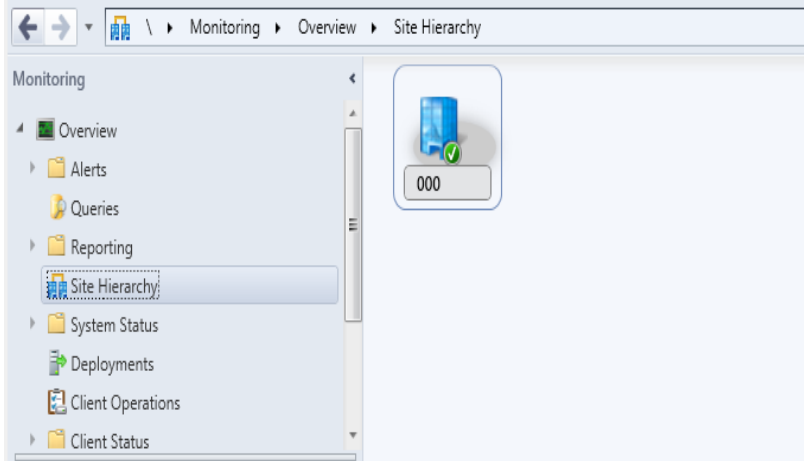

34. Daily - Check Backup Components Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>17. Identify the problem and start to work on to fix the issues.</p>

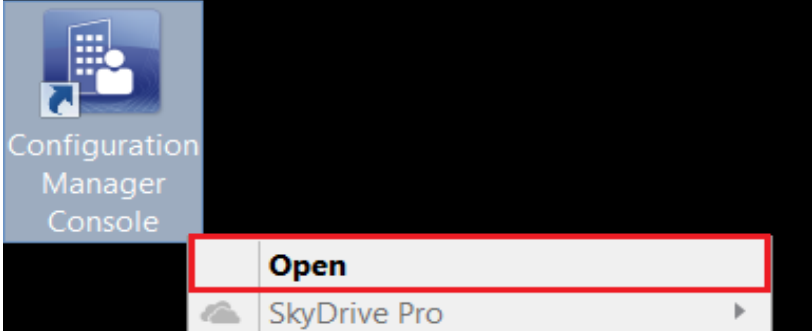

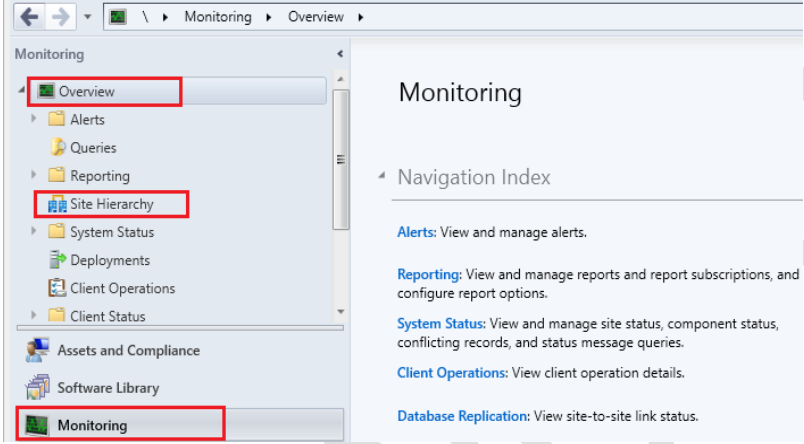

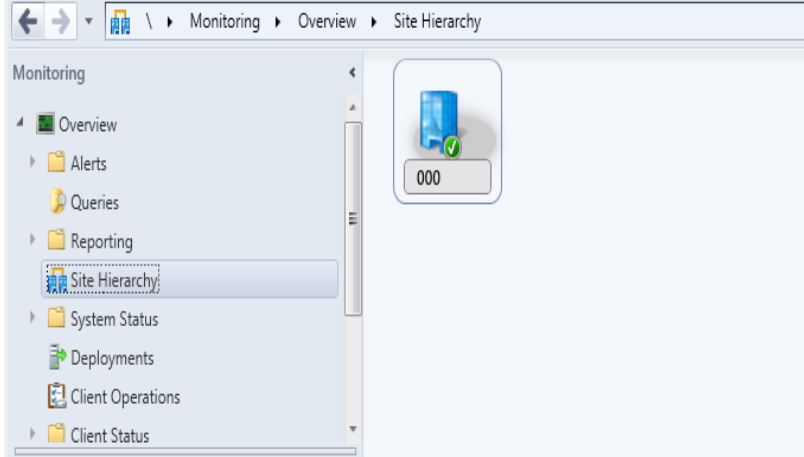

35. Daily - Check Hardware Components Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>18. Identify the problem and start to work on to fix the issues.</p>

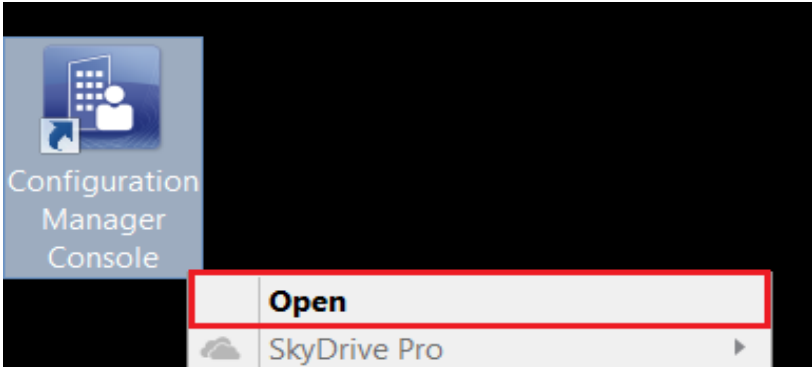

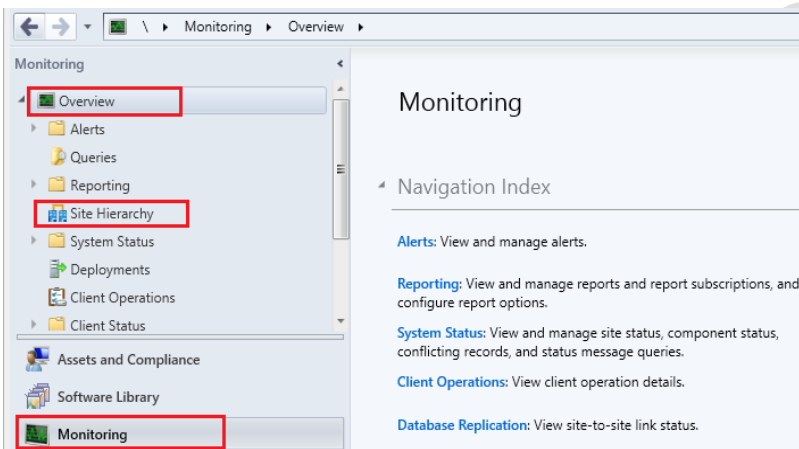

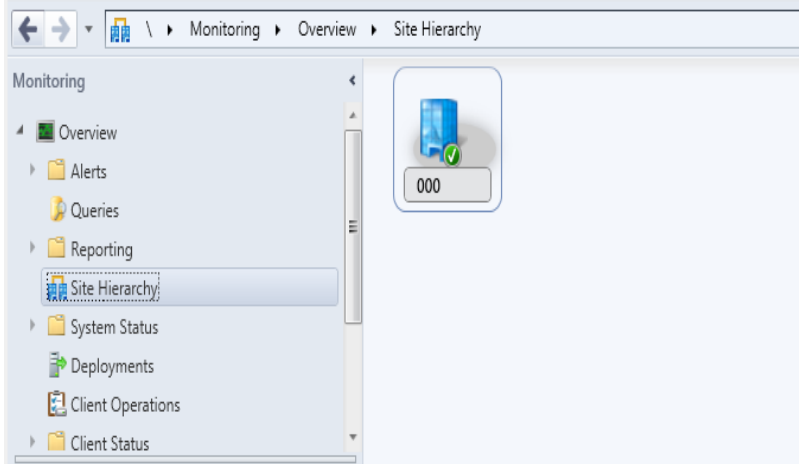

36. Daily - Check Despooler Components Status

#	Screen Shot	Steps Instructions
1		<p>Launch Configuration Manager Console.</p>
2		<p>Go to Monitoring → Select → Site Hierarchy.</p>
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>19. Identify the problem and start to work on to fix the issues.</p>

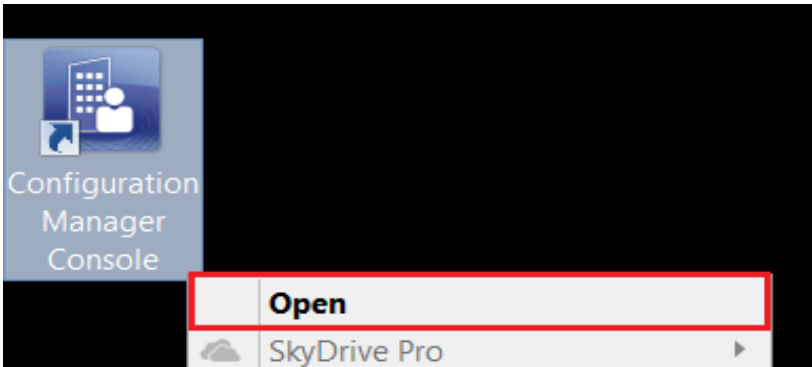

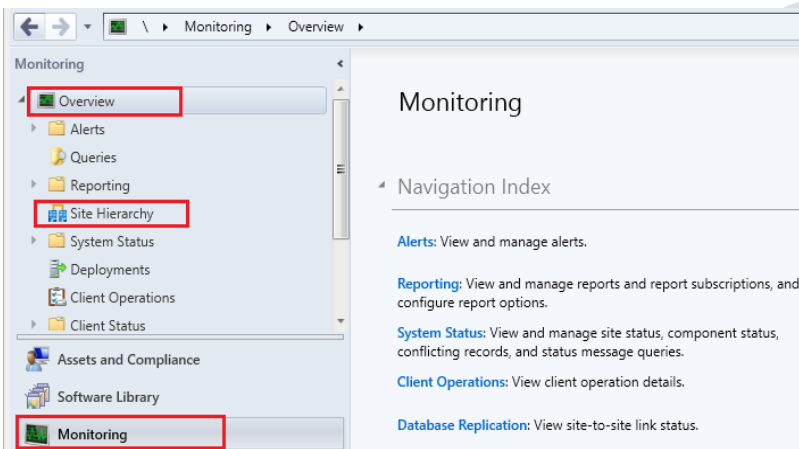

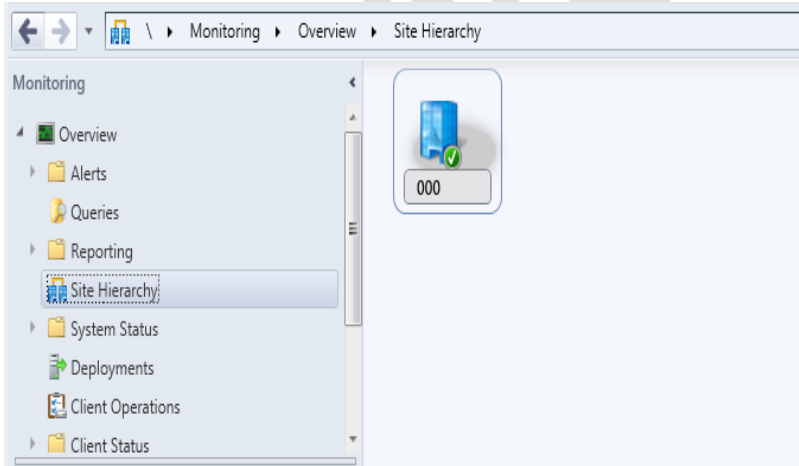

37. Daily - Check Inbox Monitor Components Status

#	Screen Shot	Steps Instructions
1		<p>Launch Configuration Manager Console.</p>
2		<p>Go to Monitoring → Select → Site Hierarchy.</p>
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>20. Identify the problem and start to work on to fix the issues.</p>

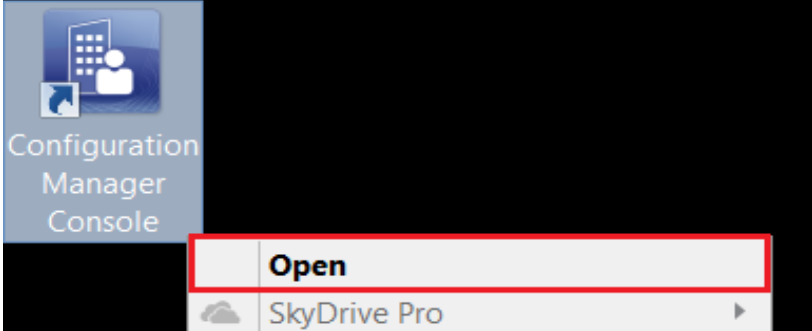

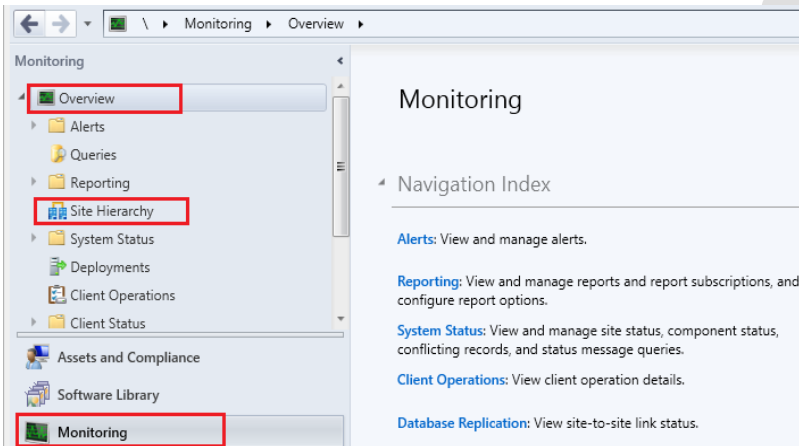

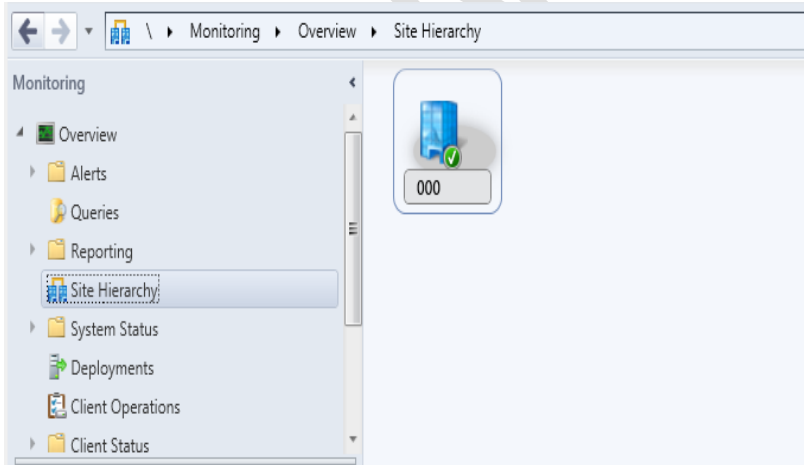

38. Daily - Check Component Monitor Components Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>21. Identify the problem and start to work on to fix the issues.</p>

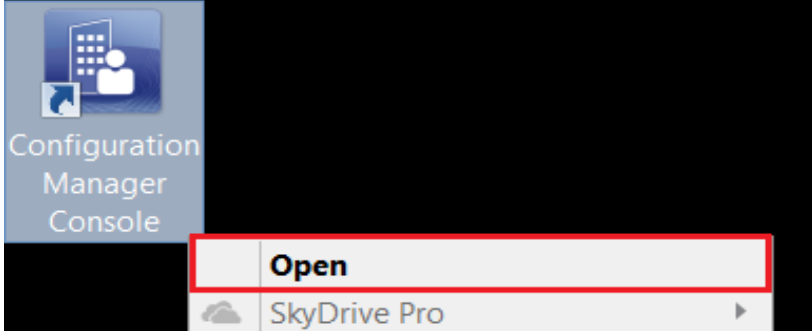

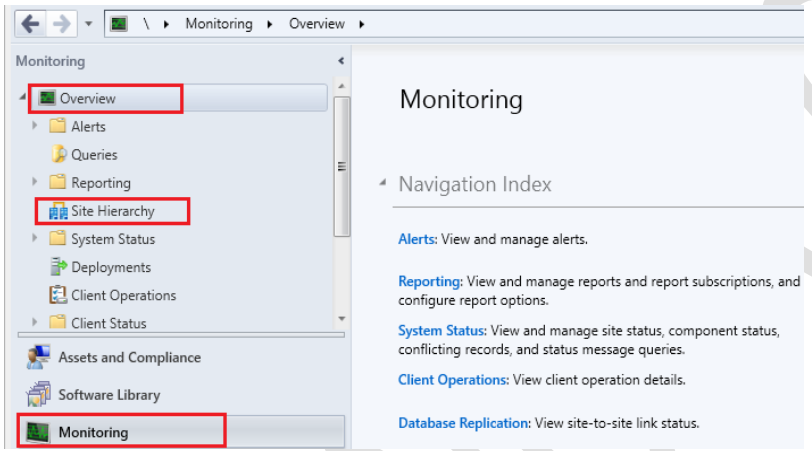

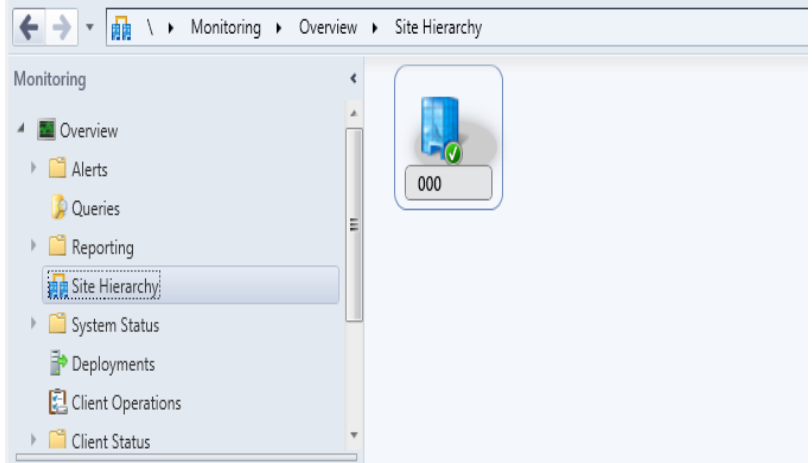

39. Daily - Check Others Components Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>22. Identify the problem and start to work on to fix the issues.</p>

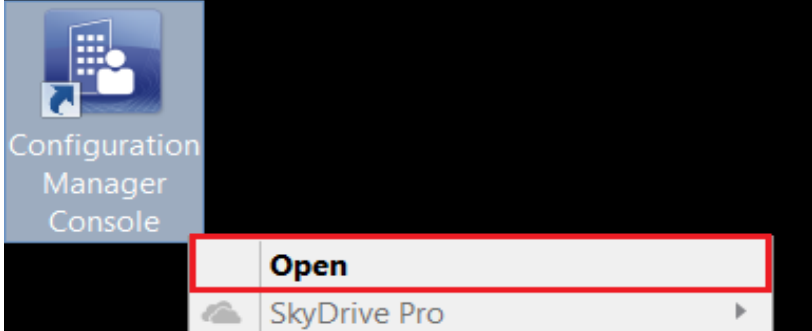

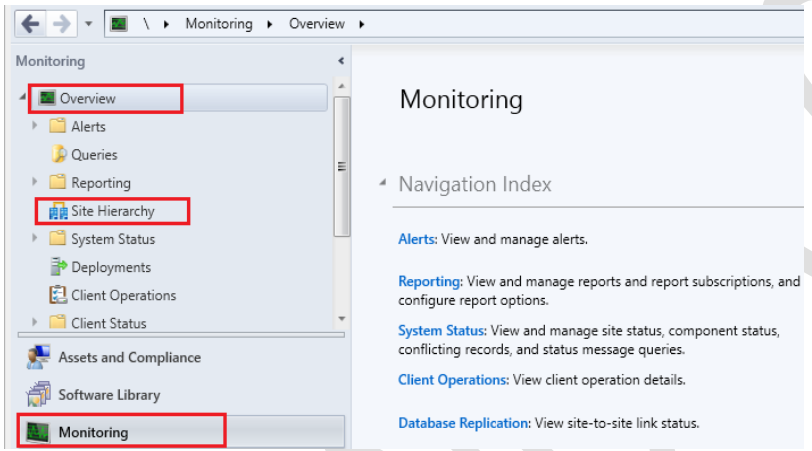

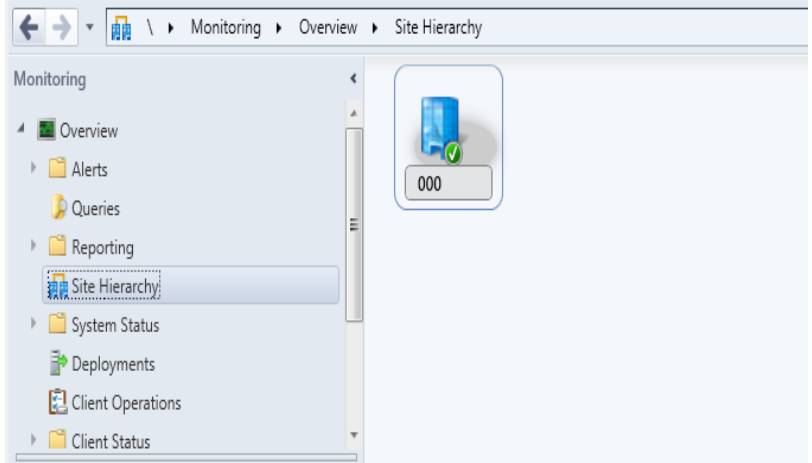

40. Daily - Check Waiting to Distribute Content Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>23. Identify the problem and start to work on to fix the issues.</p>

41. Daily - Check Maintenance Windows Collection Status

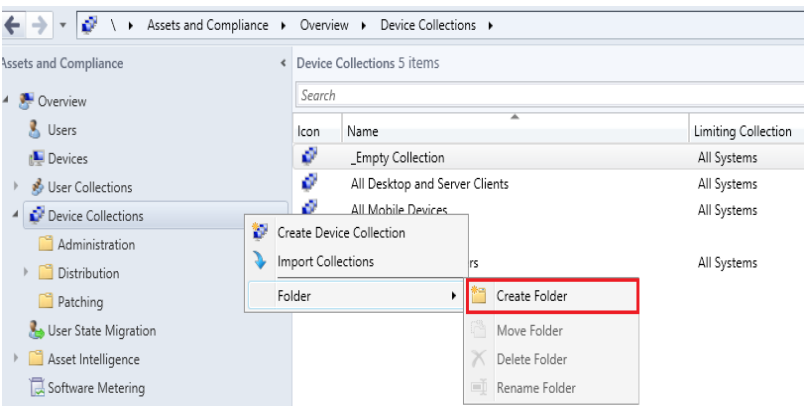

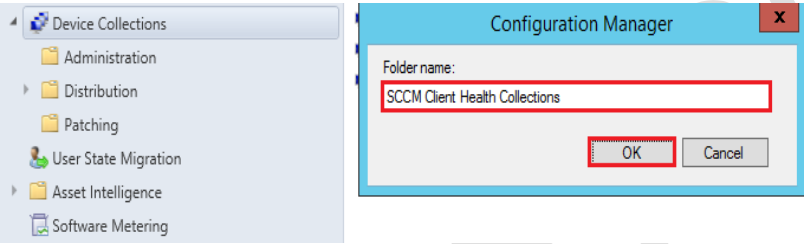

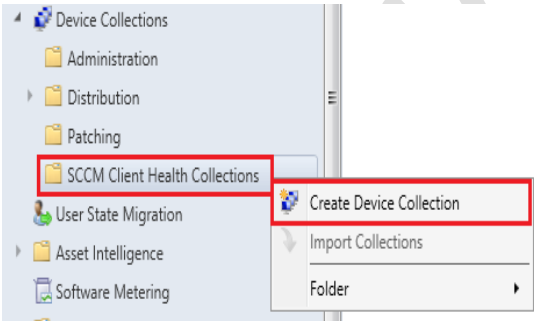

#	Screen Shot	Steps Instructions
1		<p>Launch Configuration Manager Console.</p>
2		<p>Go to Monitoring → Select → Site Hierarchy.</p>
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>24. Identify the problem and start to work on to fix the issues.</p>

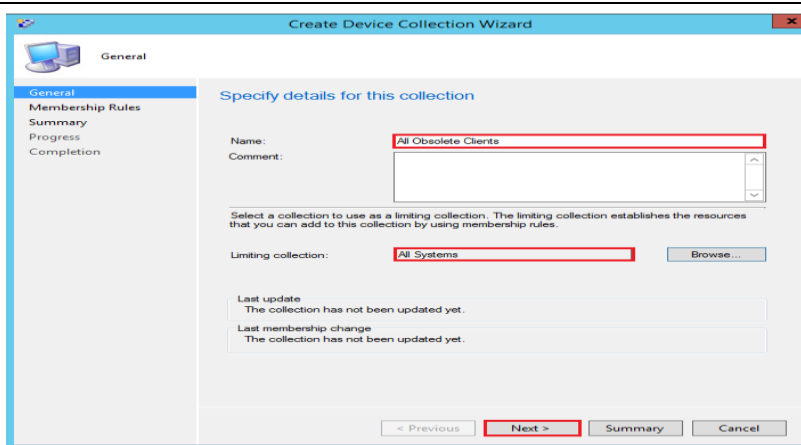

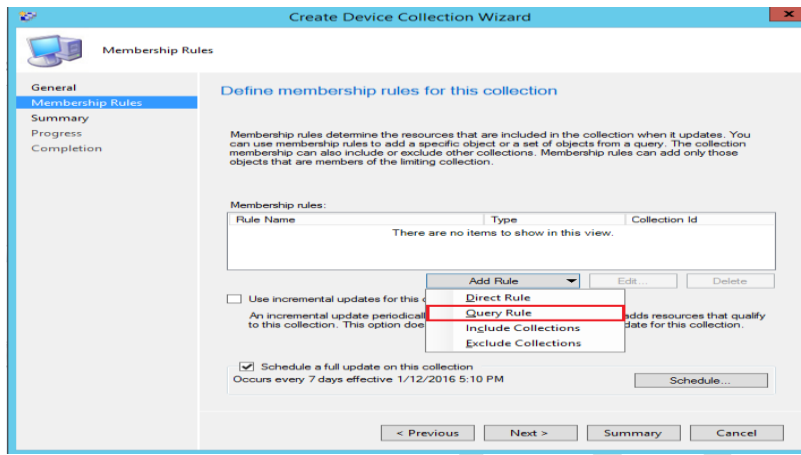

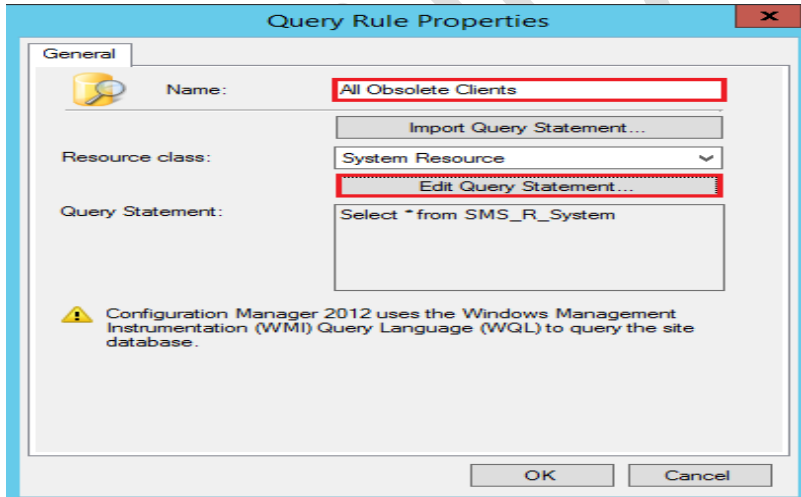

42.Weekly - Check Workstations Unhealthy Clients Status

#	Screen Shot	Steps Instructions
1		<p>Launch Configuration Manager Console.</p>
2		<p>Go to Monitoring → Select → Site Hierarchy.</p>
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>25. Identify the problem and start to work on to fix the issues.</p>

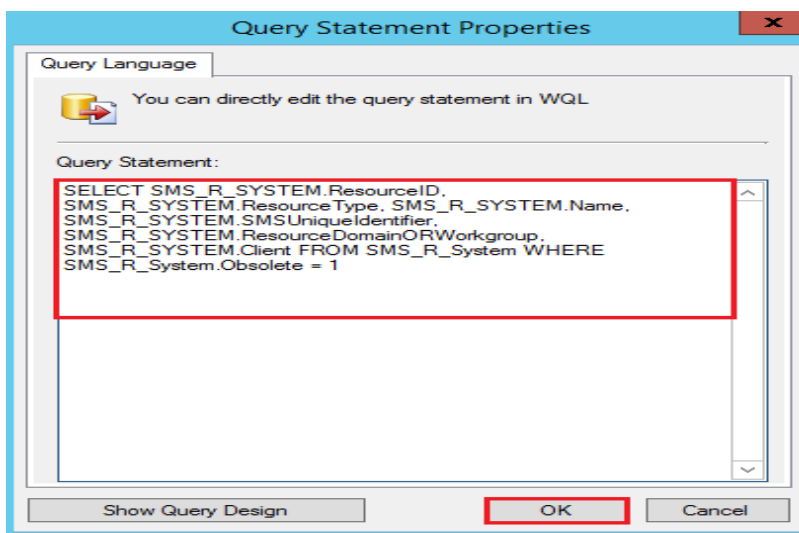

43.Weekly - Check Obsolete Clients Status

Ensure before proceeding this step get confirmation from respective account owner then delete the obsolete objects from ConfigMgr.

#	Screen Shot	Steps Instructions
1		Select Device Collections → Right Click → Folder → Create Folder → Click.
2		Create a new folder name as SCCM Client Health Collections .
3		Create a new Collection under SCCM Client Health Collections Folder.

4		<p>Create a new Collection name as All Obsolete Clients and limiting that collection to All Systems then click Next.</p> <p>***** Recommended to limit All Systems Collection *****</p>
5		<p>Click Add Rule then Select Query Rule.</p>
6		<p>Type Query Rule Name as All Obsolete Clients then Click Edit Query Statements.</p>

7

Query Statement Properties

Query Language

You can directly edit the query statement in WQL

Query Statement:

```
SELECT SMS_R_SYSTEM.ResourceID,
SMS_R_SYSTEM.ResourceType, SMS_R_SYSTEM.Name,
SMS_R_SYSTEM.SMSUniqueIdentifier,
SMS_R_SYSTEM.ResourceDomainORWorkgroup,
SMS_R_SYSTEM.Client FROM SMS_R_System WHERE
SMS_R_System.Obsolete = 1
```

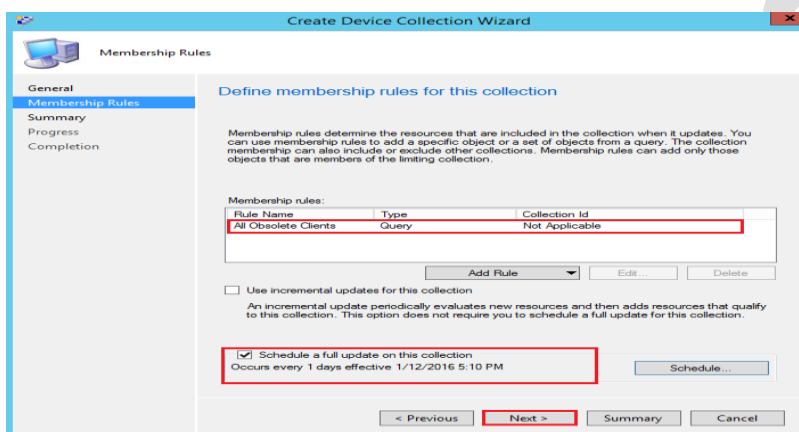

Show Query Design OK Cancel

Place the below WQL Query inside the textbox and click **OK**. Ensure there is no Human errors while placing the WQL Query.

WQL Query:

```
SELECT SMS_R_SYSTEM.ResourceID,
SMS_R_SYSTEM.ResourceType,
SMS_R_SYSTEM.Name,
SMS_R_SYSTEM.SMSUniqueIdentifier,
SMS_R_SYSTEM.ResourceDomainORWorkgroup, SMS_R_SYSTEM.Client FROM
SMS_R_System WHERE
SMS_R_System.Obsolete = 1
```

Membership Rules

General Membership Rules Summary Progress Completion

Define membership rules for this collection

Membership rules determine the resources that are included in the collection when it updates. You can use membership rules to add a specific object or a set of objects from a query. The collection membership can also include or exclude other collections. Membership rules can add only those objects that are members of the limiting collection.

Rule Name	Type	Collection Id
All Obsolete Clients	Query	Not Applicable

☐ Use incremental updates for this collection
 An incremental update periodically evaluates new resources and then adds resources that qualify to this collection. This option does not require you to schedule a full update for this collection.

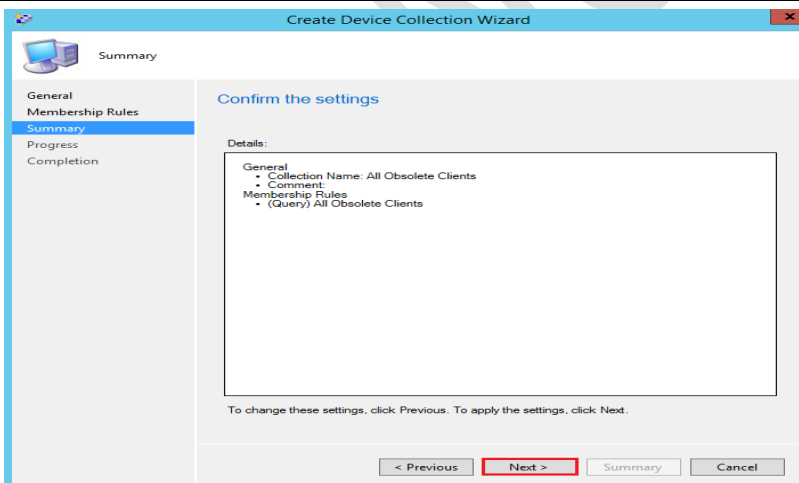

☒ Schedule a full update on this collection
 Occurs every 1 days effective 1/12/2016 5:10 PM

Add Rule Edit... Delete

< Previous Next > Summary Cancel

Ensure that **All Obsolete Query Rule** is added and change the **Schedule full update** on this collection settings as "**Occurs every 1 days...**" then click **Next**.

Create Device Collection Wizard

Summary

General Membership Rules Summary Progress Completion

Confirm the settings

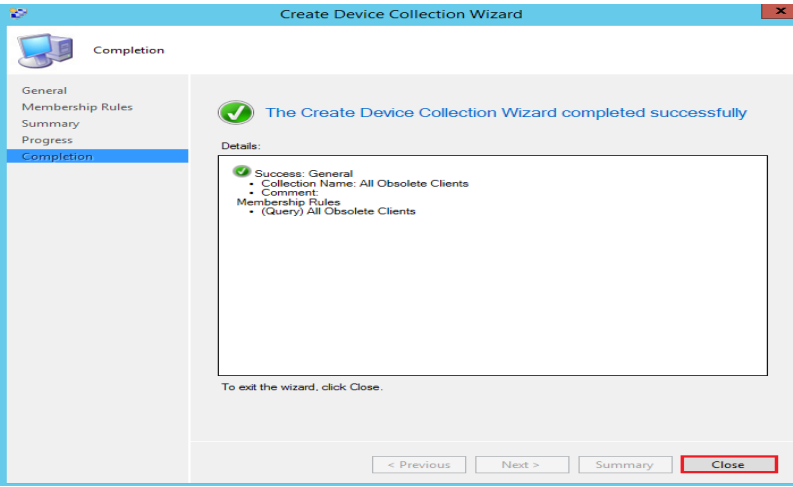

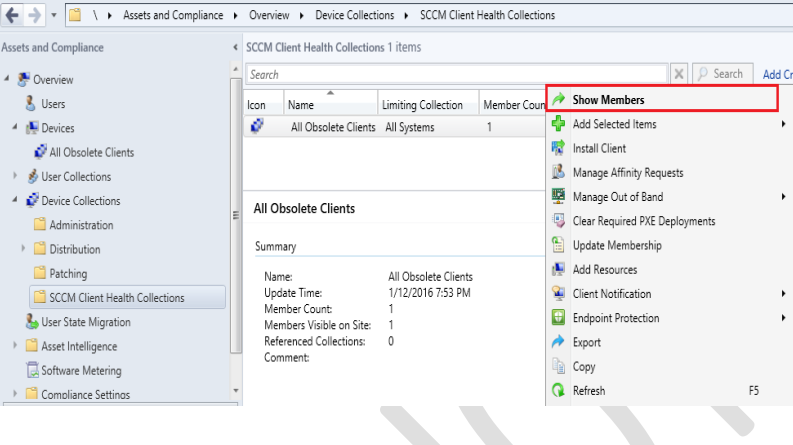

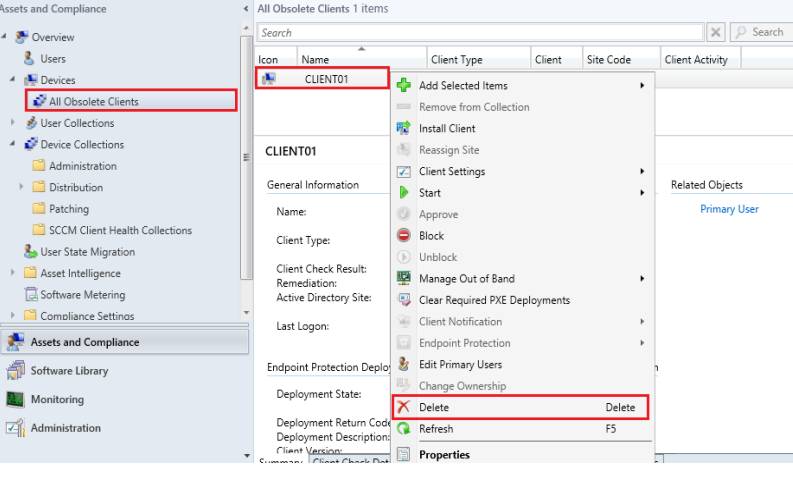

Details:

- General
 - Collection Name: All Obsolete Clients
- Comment
- Membership Rules
 - (Query) All Obsolete Clients

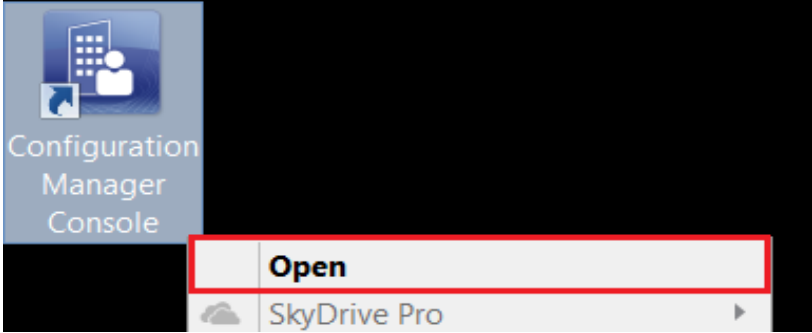

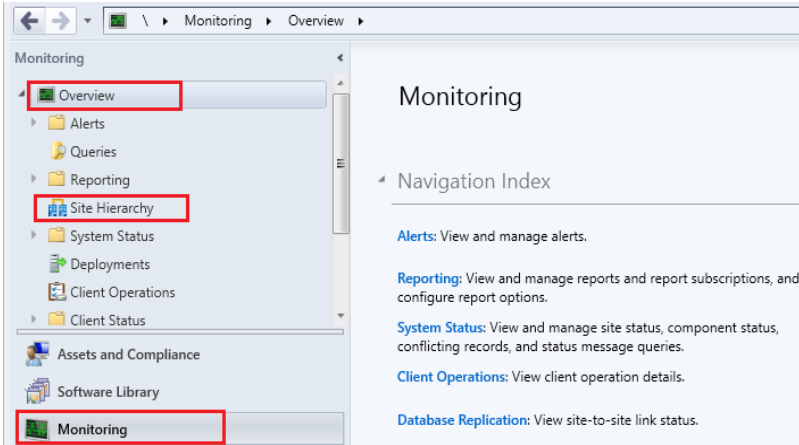

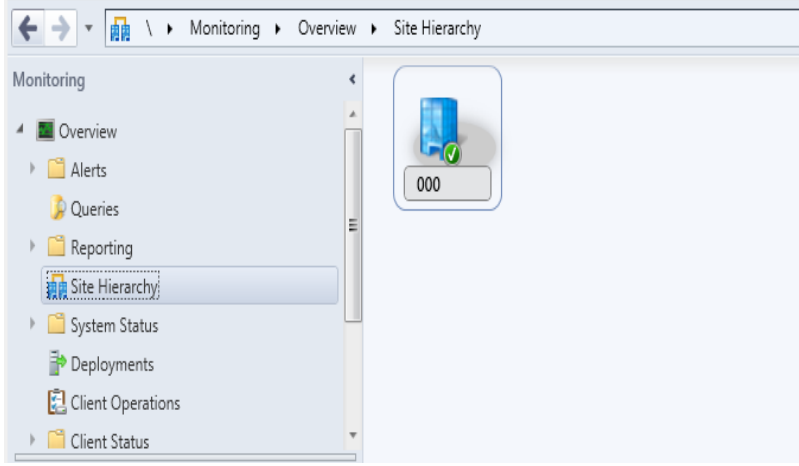

To change these settings, click Previous. To apply the settings, click Next.

< Previous Next > Summary Cancel

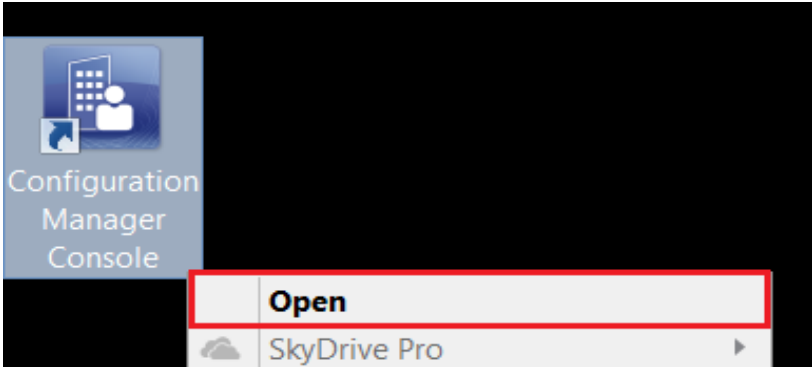

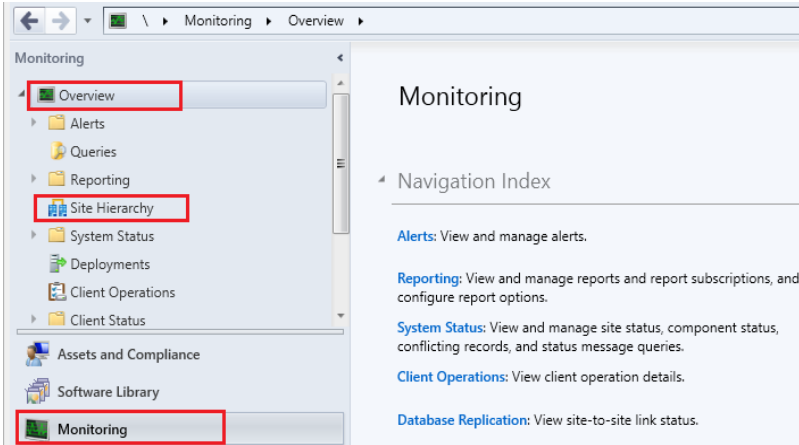

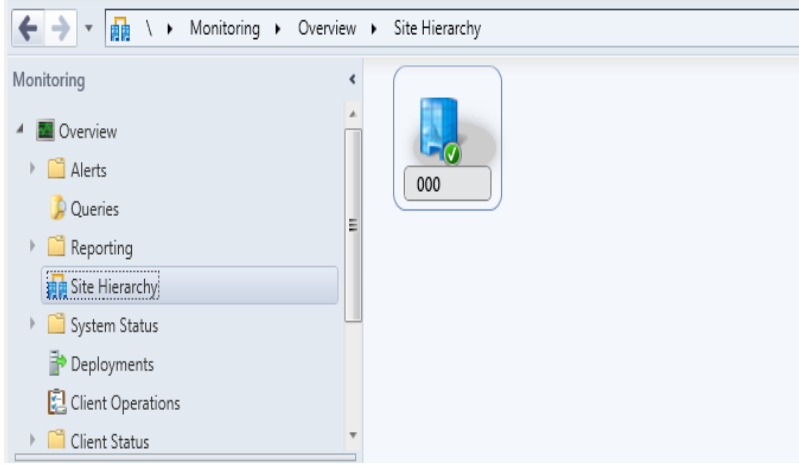

Click **Next**.

10		Click Close .
11		Select the All Obsolete Clients Collection → Right Click → Select → Show Members .
12		Select all Obsolete Clients → Right Click → Select → Delete . ***** Before deleting Obsolete clients, Ensure all objects are showing as Obsolete status is Yes *****

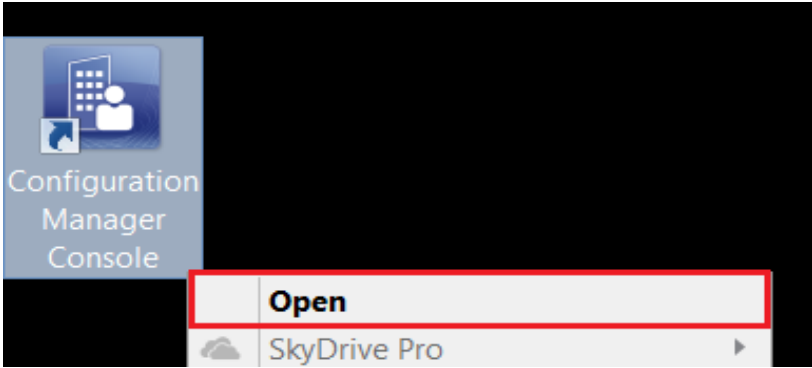

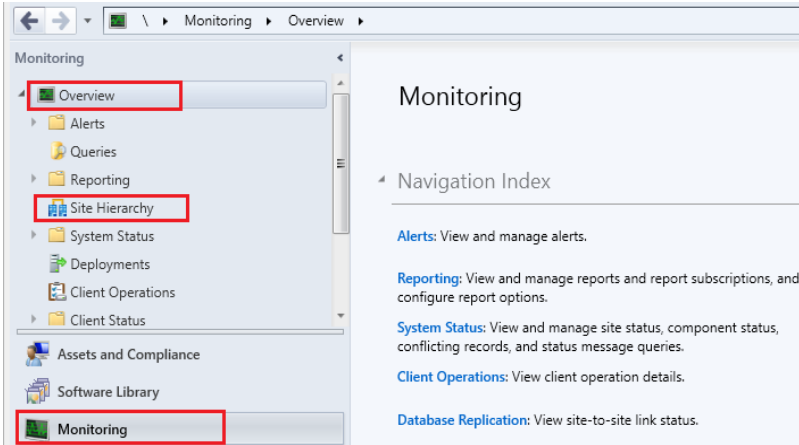

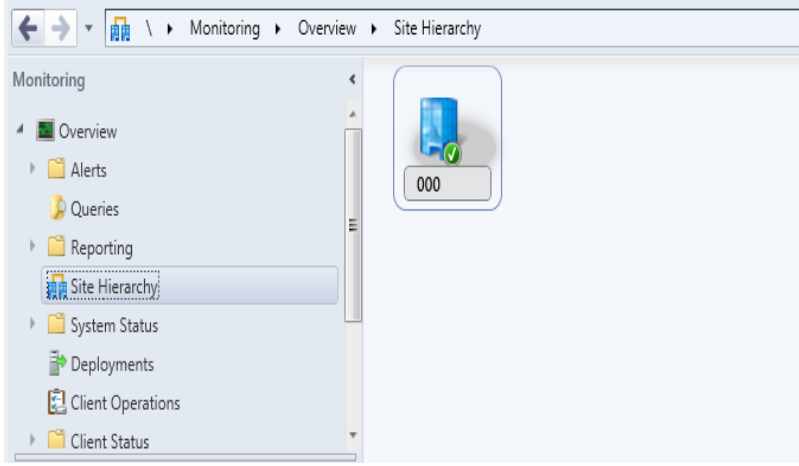

44. Monthly - Check Overall ConfigMgr KPI Data Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>26. Identify the problem and start to work on to fix the issues.</p>

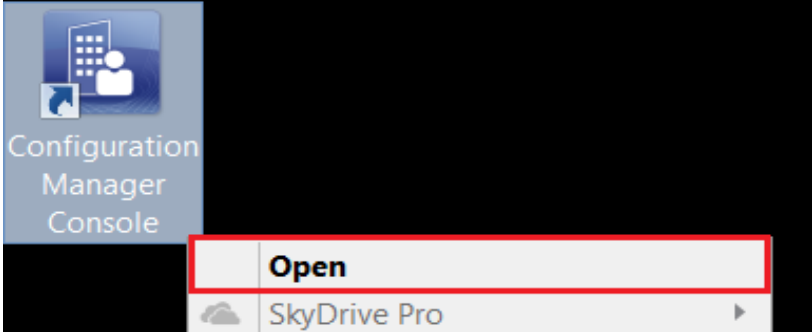

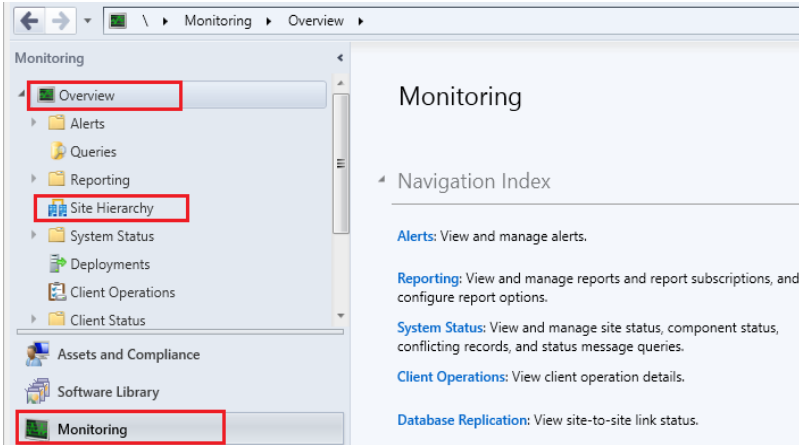

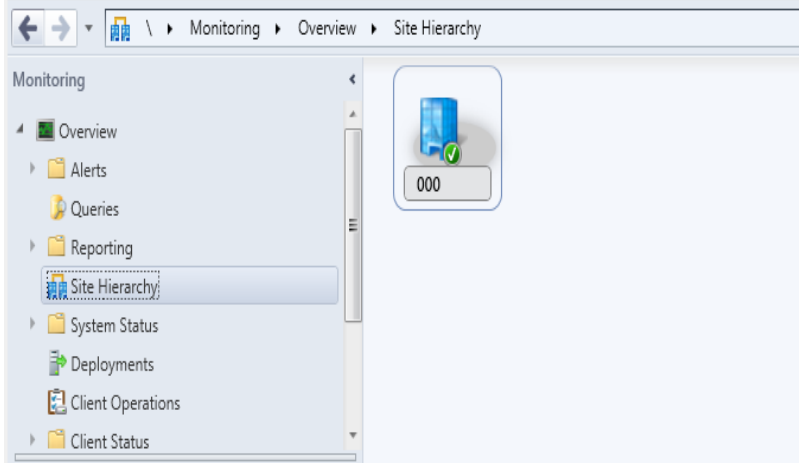

45.Monthly - Check Overall ConfigMgr Managed Assets Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>27. Identify the problem and start to work on to fix the issues.</p>

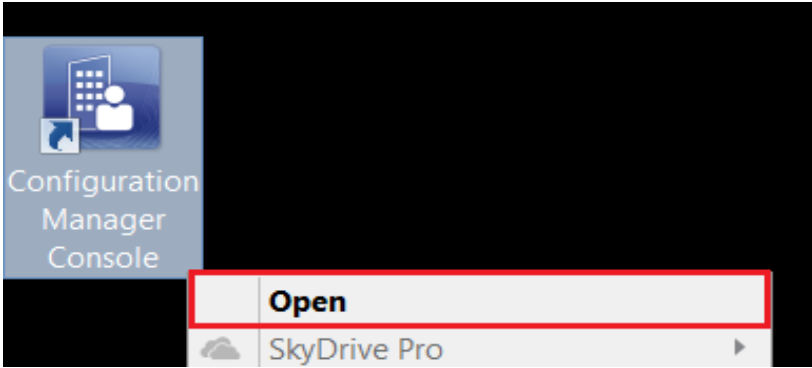

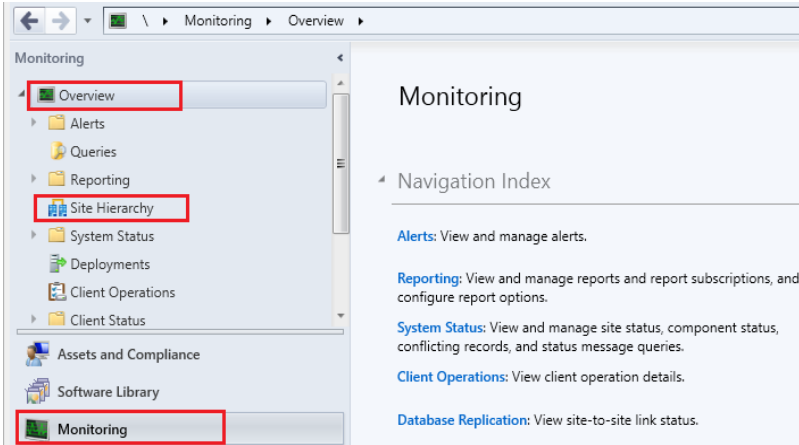

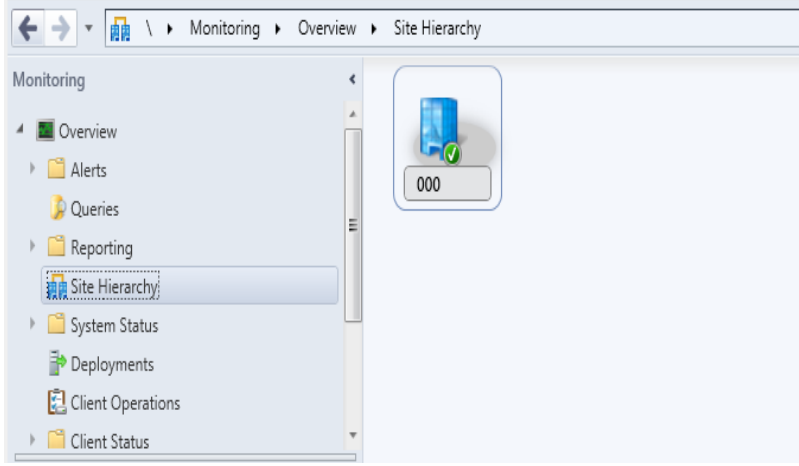

46.Monthly - Check Overall ConfigMgr Deployments Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>28. Identify the problem and start to work on to fix the issues.</p>

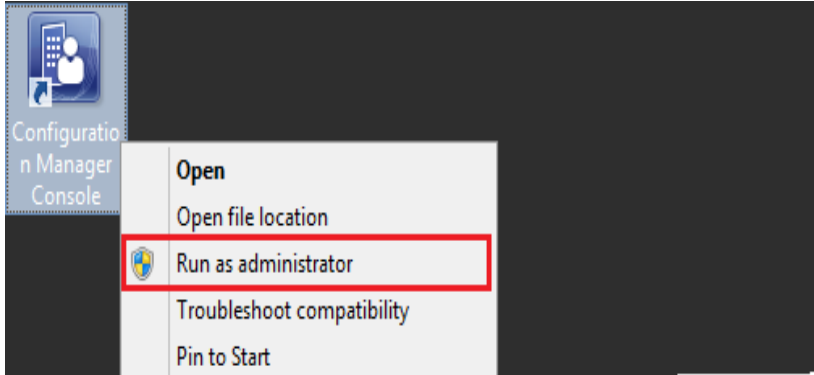

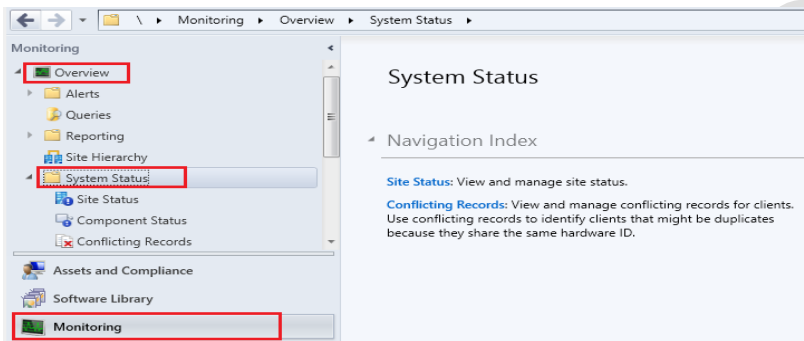

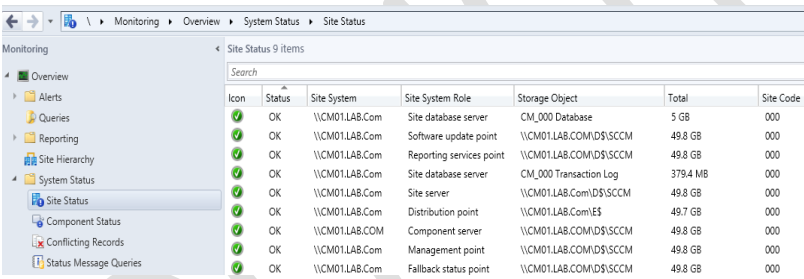

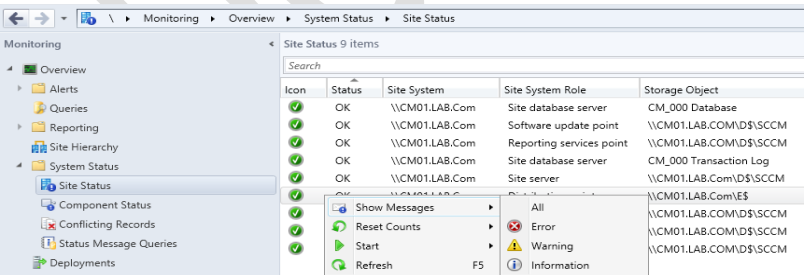

47. Monthly - Check Overall ConfigMgr Packages Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>29. Identify the problem and start to work on to fix the issues.</p>

48.Monthly - Check Overall ConfigMgr Collections Status

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.
3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>30. Identify the problem and start to work on to fix the issues.</p>

55. Quarterly - Check ConfigMgr Infrastructure Site Hierarchy Details

#	Screen Shot	Steps Instructions
1		Launch Configuration Manager Console.
2		Go to Monitoring → Select → Site Hierarchy.

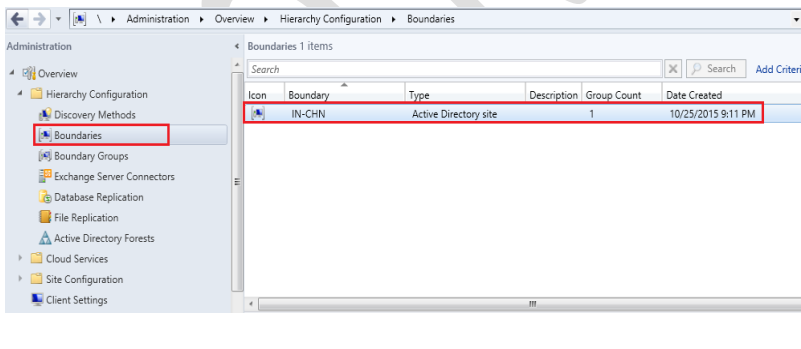

3		<p>Green tick on the Site Hierachy indicates the Site health.</p> <p>If a server is shown in red:</p> <p>31. Identify the problem and start to work on to fix the issues.</p>
---	---	---

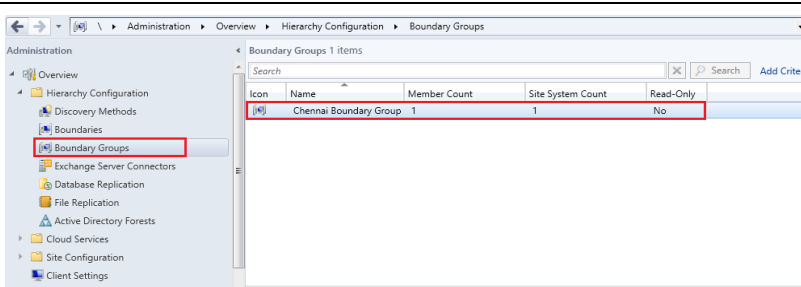

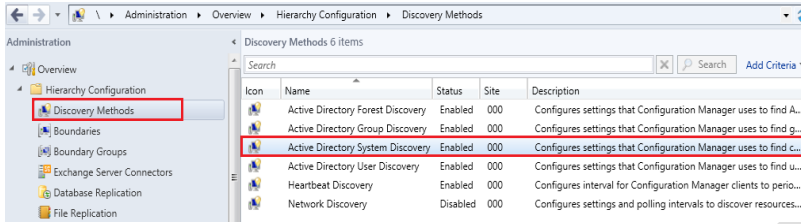

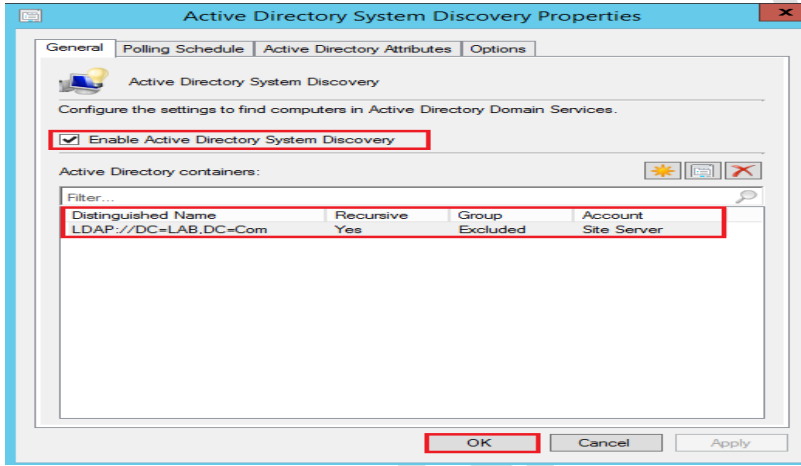

56. Quarterly - Check ConfigMgr Security Users and Rights Details

#	Screen Shot	Steps Instructions
1		<p>Launch Configuration Manager Console</p>

2		<p>In ConfigMgr Console → Select → Administration Node → Select Administrative users.</p> <p>Ensure the Security roles are assigned as per the agreement with the CUSTOMER.</p>
---	--	---

57. Quarterly - Check ConfigMgr Site Boundaries and OU Mapping Details

#	Screen Shot	Steps Instructions
1		<p>Expand Administration → Overview → Select Hierarchy Configuration → Select → Boundaries.</p>

2		Expand Administration → Overview → Select Hierarchy Configuration → Select → Boundary Groups .
3		Expand Administration Overview → Select Hierarchy Configuration → Select → Discovery methods → select → Discovery Methods → select → Active Directory System Discovery .
4		Verify the required OUs are added.

Technical Reference

1. Management Point Issue with error code 500

Issue:

MP Control fails with HTTP test request failed, status code is 500, 'Internal Server Error' on a Management Point running a 64-bit OS hosting 32-bit (x86) based IIS. The MP Control log contains the following.

Browsing to `http://<SiteServerName>/SMS_MP/.sms_aut?MPlist` returns a 500 as well.

Cause:

This problem occurs because the ASP.NET registry keys are missing. The ASP.NET registry keys are missing when you install ASP.NET after the Enable32bitAppInWin64 Microsoft Internet Information Services (IIS) Meta base setting is set to a value of 1. Because IIS is configured to run in 32-bit mode, the installation creates the ASP.NET registry keys only in the 32-bit registry.

Solution:

1. Click **Start**, Click Run, type **CMD** and then click **OK**.
2. To Enable the 64-bit mode, type the following command, and then press ENTER
Cscript %SYSTEMDRIVE%\inetpub\adminscripts\adsutil.vbs SET W3SVC/AppPools/Enable32bitAppOnWin64 0
3. Type the following command, and then press ENTER:
Cd C:\Windows\Microsoft.NET\Framework64\v2.0.5.0727
4. To Install the 64-bit version of ASP.NET, type the following command, and then press ENTER:
aspnet_regiis -i
5. Type the following command, and then press ENTER **IISRESET**
6. Check SMS Host Agent services is running fine.
7. Reset IIS Service and other ConfigMgr related Services.

2. Inbox DDR Backlog Issue

Issue:

DDR Backlog issue

Inside DDM.box "n" number of DDR files are not processed.

Cause:

DDR files are corrupted, ConfigMgr agent is not installed properly.

Solution:

1. Check the DDM.log file and find out which DDR is blocking the process
2. Delete the file from Inbox\auth\ddm.box
3. Check DDM.log if any other DDR's are blocking the process, if yes please delete those records also from Inbox\auth\ddm.box
4. Delete the machine from ConfigMgr console and install the ConfigMgr agent from client side.

3. Packages which are waiting to install stage for long days

Issue:

Packages which are waiting to install stage for long days

Cause:

Issue could be in Package Synchronization or Distribution Manager Service.

Solution:

1. Use the below query to find the list of packages which are pending to install stage

```
Select
dp.SiteCode as 'SiteCode',
substring(dp.ServerNALPath,13,9) as 'ServerName',
dp.PackageID as 'PackageID',
p.Name as 'PackageName',
P.SourceVersion as 'SourceVersion',
P.LastRefreshTime as 'LastRefreshTime',
stat.InstallStatus as 'InstallStatus'
from v_DistributionPoint dp left join v_PackageStatusDistPointsSumm stat on
dp.ServerNALPath=stat.ServerNALPath and dp.PackageID=stat.PackageID
left join v_PackageStatus pstat on dp.ServerNALPath=pstat.PkgServer and
```

```
dp.PackageID=pstat.PackageID left outer join v_Package p on dp.packageid = p.packageid
where stat.InstallStatus not in ('Package Installation complete')
ORDER BY 1
```

2. Use the below query to reset the package status

```
select * from PkgStatus where id = 'PackageID' and sitecode = 'SiteCode' and type=1
update PkgStatus set Status =2 ,sourceversion = 0 where id = 'PackageID' and sitecode = 'SiteCode' and type = 1
select * from PkgStatus where sitecode = 'SiteCode' and type=1
```

3. Then refresh the packages to Distribution Points from ConfigMgr Console.

4. ConfigMgr Backup Failed, Error: VSS_E_WRITERERROR_TIMEOUT

Issue:

ConfigMgr Site server backup got failed with the error VSS-E_WRITERERROR_TIMEOUT in smsbkup.log

Cause:

SMS Writer is not stable, error message is timed out.

Solution:

1. Check SMS_SITE_VSS_WRITER is present and started state
2. Check SQL Server VSS Writer service is present and started state. If Site Database is configured on remote machine, this should be running there.
3. Check in Event Logs if there are any errors about these two services.
4. Check VSS writers functionality by running the below command line from command prompt

Vssadmin list writers

5. Verify the output of the above command line, both SMS Writer and SQLServerWriter are present and their state should be "Stable" and Last Error shows "No Error"

5. ConfigMgr Backup Failed: Backup failed for component SMS_SITECODE

Issue:

ConfigMgr Site Server & Site Database backup got failed with the error "Backup Failed for Component SMS_SITECODE"

Cause:

ConfigMgr Backup failed because of huge Site Server data.

Solution:

1. Open **regedit**
2. Locate the below registry subkey
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Session Manager\Memory Management
3. On the **Edit** menu point to New, and then click **DWORD value**
4. Type **PoolUsageMaximum** as the entry name, and then press ENTER
5. Right-Click **PoolUsageMaximum** and the click **Modify**
6. Click **Decimal**
7. In the **Value data** box, type **60**, and then click **OK**

8. Close the Registry Editor
9. Restart the Site Server.

Important:

1. Use 60 as the initial value, if the backup doesn't succeed use the value as 40.
2. Make sure the value for the registry setting not more than 60.

6. Duplicate GUID Issues

Issue:

MP Control Manager shows warnings about Duplicate GUIDs

Cause:

Resource ID is not approved in ConfigMgr.

Solution:

1. Find and Delete the Duplicate GUID using below SQL Query
`select * from System_DISC where SMS_Unique_Identifier0 = 'GUID:C9B0D73B-48DC-49AC-A7F6-87C23C538EA4'`
`delete from System_DISC where SMS_Unique_Identifier0 = 'GUID:C9B0D73B-48DC-49AC-A7F6-87C23C538EA4'`
2. Restart SMS related services
3. Reset IIS service

7. SMS_INVENTORY_DATA_LOADER Failed to process the records

Issue:

Inventory Data Loader failed to process the file Program Files\Microsoft Configuration Manager\Inboxes\Auth\dataldr.box,

Cause:

Inventory Data Loader's MIF file reaches the maximum defined allowable size of 5000000 (5 MB).

Solution:

1. We need to increase the maximum allowable size Inventory Data Loader's MIF file.
2. We need to do the below registry changes to increase the maximum allowable size.
HKLM\Software\Microsoft\SMS\Components\SMS_INVENTORY_DATA_LOADER\Max MIF Size (the default is 5 MB)
3. Right-click the Max MIF Size, select Decimal and enter the value data more than 5 MB. Microsoft will allow us to increase till 50 MB, however the best practice is to do the minor increases from the default value (5 MB).

8. SMS_WSUS_SYNC_Manager Failed to sync Software Updates

Issue:

Failed to sync some of the updates, Error: License agreement not ready. This is a transient state while WSUS is downloading the agreement.

Cause:

BITS download foreground priority was not enabled.

Solution:

1. If we are using WSUS 3.0 with a Windows Internal Database that was created by a default WSUS installation, type the following command to enable BITS Download Foreground priority.

`%programfiles%\Update Services\Setup\ExecuteSQL.exe -S %Computename%\MICROSOFT##SSEE -d "SUSDB" -Q "update tbConfigurationC set BitsDownloadPriorityForeground=1"`
2. Restart the Update Services service
3. Sync in ConfigMgr
